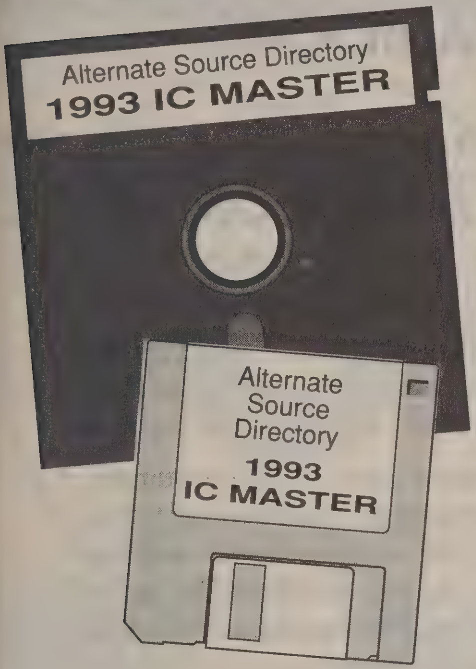
ICMASD

Alternate Source Directory



The all new 1993 ICMASD-IC Alternate Source Directory on Disk is identical to the Alternate Source Directory Section contained in Volume Two of the printed version of the 1993 IC Master. All you need is an IBM XT/AT or 100% compatible personal computer with hard drive.

ICMASD is the most comprehensive and reliable guide available to all ICs known to have a realistic replacement or alternative. The 1993 version contains over 106,000 listings to help you find the functional equivalents for both current and discontinued parts.

The electronic ICMASD is fast, convenient...and can be customized for your specific needs!

ENHANCED FLEXIBILITY

ICMASD is organized in a similar fashion to the printed version in the IC MASTER. The database is arranged by manufacturer, showing the manufacturer's original basic part number. All known replacements for that part are listed in alphanumeric order.

The enhanced flexibility of the electronic ICMASD allows you to add comments, up to 19 digits long, to any device listing in the system. These comments can be part numbers, project notes, prices, or any information unique to your application.

USER FRIENDLY

ICMASD is very user friendly. There are no tricky commands to learn. The software is completely menu driven. ICMASD comes complete with documentation that is brief and to the point. It can be ordered on five 51/4" double-sided, double-density disks OR on one 51/4" high-density disk OR on one 31/2" high-density disk.

Published annually in March

FAST AND CONVENIENT

ICMASD includes a complete Manufacturers & Distributors Directory listing the addresses and phone numbers of every manufacturer in the IC industry. With this complete directory any manufacturer or distributor is just a phone call away.

To order your 1993 ICMASD,
contact your local IC MASTER distributor or, send your purchase order and check for $179.50 plus tax* to:

THE FAST AND EASY WAY TO FIND IC MANUFACTURERS' DATA BOOKS!

The 1993 DIRECTORY OF IC MANUFACTURERS' DATA PAGES is a unique index designed to save you time and help you find the manufacturers' precise data book or sheet that you need on any integrated circuit listed in the 1993 IC Master.

Simply look up any IC by base number. The cross-reference will show you the manufacturer's complete device number together with the name and issue date of the applicable manufacturers' data book.

For example: If you wanted the complete manufacturers' data on device number ADOP07. Look up base number 07. Following the base number is the manufacturer's name...Analog Devices, the complete device number ADOP07 and the page number of where the device is described in the IC Master. The listing will then show you that the manufacturer's data book is Analog Devices "Linear Products DataBook" .

Now you can contact Analog Devices by phone or FAX and request the EXACT data book you need. No wasted words, no wasted time.

Plus, where and whom to call for technical information, at any IC manufacturer, is at your fingertips in the complete Manufacturers & Distributors Directory.

MINIGLOSSARY
CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The opposition (in ohms) of capacitance to the flow of alternating current, equal to the reciprocal of the product of the angular frequency (2π times frequency in Hertz) of the current times the capacitance in farads.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The ratio of the capacitance of a capacitor with some material other than air between the capacitor plates to the capacitance of the same capacitor with air between the plates. For example, the dielectric constants of air, Teflon®, polystyrene and ruby mica are 1, 2.1, 2.6 and 5.4, respectively.

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (µF) 1 microfarad (µF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

MINIGLOSSARY
CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement*.

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

MINIGLOSSARY ENCAPSULATION

MATERIALS/HANDLING

Catalyst: A substance which changes the *rate* of chemical reaction. Very small quantities can cause fast change.

Conformal coating Sprayed or dipped. A thin conformal jacket which protects an assembly from moisture or other degrading environments.

Curing agent: See catalyst.

Hardener: See catalyst.

Hermetic: A permanent gas-tight seal.

RTV: Room Temperature Vulcanizing. Associated with silicone rubber sealants which vulcanize at room temperature.

Thermoplastic: Plastic materials which can be made to flow *repeatedly* with the application of heat.

Thermosetting: Plastics which once cured cannot be made to flow again.

Thixotropy: The property of a coating compound which has low viscosity when agitated, but which thickens when the agitation ceases.

Viscosity: Measured in units of *poise* or *centipoise.* The property of a liquid which resists internal flow. Low viscosity equates with thin and vice-versa.

PROCESSING

Casting: Parts or assemblies are placed in a mold. Encapsulating material is added and cured. Part is then removed from the mold.

Dip coating: Part or assembly is dipped into the encapsulating material. Final thickness is determined by number of dips, viscosity, rate of withdrawal, and temperature.

Embedding: Wherein an encapsulant substantially fills all voids in and about an assembly.

MINIGLOSSARY SERVO COMPONENTS

SPECIFICATIONS

Excitation: The input voltage and frequency.

Transformation Ratio: The ratio of the output voltage, at maximum coupling, to the input voltage.

Phase Shift: The lead or lag of the output voltage with respect to the input voltage. For most synchros and resolvers, the phase shift can be approximated by the angle whose tangent is the ratio of the primary winding's DC resistance to its reactive component.

Impedance: Specified as R + jX, where R is the AC resistive component and X is the reactive component. Important impedances are: (a) Z_{po} (or Z_{ro} for rotor primary units), which is the impedance of the primary winding with the secondary open; (b) Z_{so}, which is the impedance of the secondary winding with the primary open; and (c) Z_{ss}, which is the impedance of the secondary with the primry shorted (essentially when driven by a low impedance).

Null Voltage: The voltage remaining when the unit is at electrical zero or in the minimum coupling position.

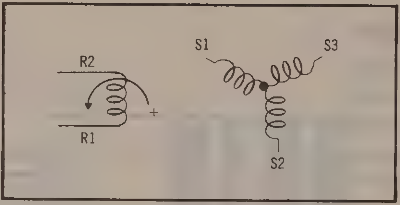
Accuracy: The error of the position of the rotor with respect to the electrical angle. It is defined as the output voltage driven by the "speed" (pole pairs) of the unit, referenced to the starting point of the calibration (usually the electrical zero position). Error is commonly expressed in minutes of arc (1/60 of a degree) or in seconds of arc.

Loads: For a transmitting unit, the impedance that the output voltage signal faces. This can be a receiver, a differential with its load, a control transformer, an A/D converter, etc.

Operation Temperature: The ambient temperature range over which the unit performs its primary function.

FUNCTIONS

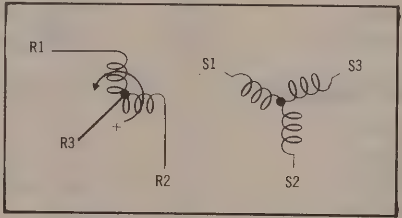
Transmitter: A unit with a Y-connected stator that outputs a signal proportional to the position of its single-phase excited rotor. High power units, called "torque transmitters," are used to drive one or more receivers. Low power transmitters are used to drive control transformers.



Receiver: A unit with a three-phase stator excited by the input, usually from a torque transmitter, and a single-phase rotor that follows the resulting stator field. Usually used to drive a position pointer.

Control Transformer: A unit with a three-phase stator excited by the input from a transmitter and a single-phase rotor mechanically driven to the null position by an external motor or other device.

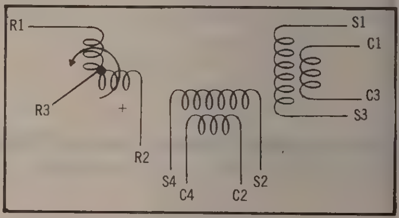
Differential: A unit with a three-phase stator and a three-phase rotor. It is usually connected between a transmitter, which excites its stator, and a receiver or control transformer. It can be used to "dial in" correction factors for the synchro chain.



Transolver: A unit with a three-phase stator and a two-phase rotor that can be used either as a control transmitter (with one rotor phase excited and the other shorted), or as a control transformer with the signal obtained from one phase of the rotor—making sure the other phase is equally loaded to prevent unbalances.

Differential Resolver: A unit with a two-phase stator and a three-phase rotor that is used as a transolver with the advantage that when connected as a control transformer, the signal does not travel through slip rings.

Resolver: A unit with a two-phase rotor and a two-phase stator that is used to create or receive SIN-COS signals such as vector resolutions for solving inertial platform coordinate transformations, unknowns of right triangles, etc. Resolvers can also be used as transmitting, differential, or receiving elements by proper choice of impedances. It is also possible to use resolvers as phase shifters where, in one mode, one rotor phase is excited and the two stator windings are feeding an appropriate RC network and indicating a phase shift, referred to the input, that corresponds to the rotor position.



Compensated Resolver: A unit with a "2×2" phase stator and a two-phase rotor used as a resolver with the added benefit of feedback windings in parallel with the stator windings that increase the useful accuracy over a wide range of environmental operating conditions.

Linear Transformer: A unit with a single-phase stator and single-phase rotor designed to provide a linear output voltage that is directly proportional to the rotor input angle. It operates over a range of less than ±90°, and is analogous to a potentiometer providing infinite resolution, but without contact between the elements. It can be used only with AC voltages.

Brushless Synchro: Available in two types—hairspring and bobbin. Hairspring synchros use spiral wound conductor springs to pick off the rotor signal, and are generally limited to a ±165° rotation. Most have mechanical stops to prevent damage due to overrotation. Bobbin synchros pick off the rotor signal with rotary transformers inside the unit, allowing the rotor unlimited motion.

Pancake Unit: A name derived from the physical dimensions of the unit, which has a diameter that exceeds axial length. Sizes range from under 1" to 20" or more. The unit is frequently used as a gimbal pickoff element and is designed to fit a particular application envelope. It can be supplied as a rotor and stator only.

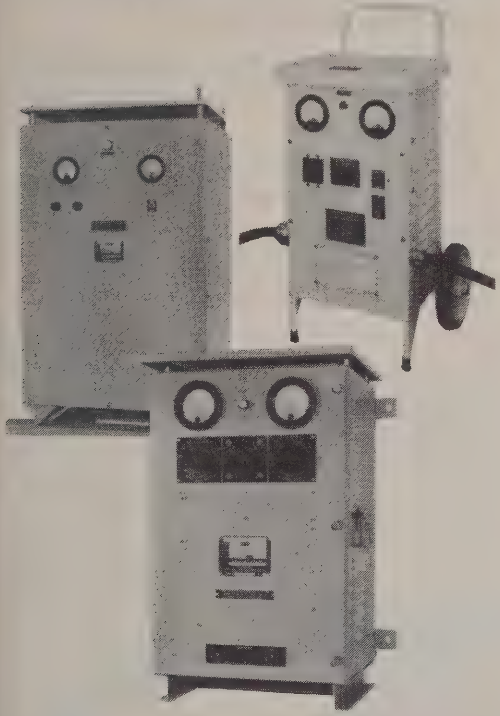
POWER SUPPLIES AND BATTERY CHARGERS



CML MACARR Mobile and Stationary DC Power Supplies Ground support, aircraft starting and convenient low voltage power

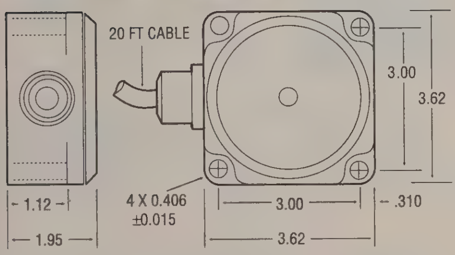
Both our stationary and mobile DC power supply units are built to deliver dependable long term performance. They meet RF interference requirements and demonstrate good inherent load regulation and low ripple. Each unit features heavy intermittent load capability and weatherproof construction suitable for outdoor duty. Mobile models feature large pneumatic tires for easy maneuverability. CML MACARR DC power supplies are capable of operating in parallel with other units of the same model with no paralleling interconnection required. Each unit includes 2% accurate output voltmeter and ammeters.

CML MACARR Battery Chargers

Lightweight, compact and versatile, CML MACARR chargers from Marine Electric Systems are typically used in military and high performance commercial applications. Model 40-30 BCN, for example, is a versatile unit which meets the requirements for small multi-purpose battery chargers. It can charge a wide variety of batteries up to 36 volts nominal (18 cells) and 300 ampere hours. The charger is a fully regulated, current limited stable source for float charging, utilizing SCR's with magnetic gating. A fully discharged battery can be safely recharged with this model. As an example of efficiency, a 130 AH battery can be recharged in 7 hours. The unit is designed for easy maintenance. All electronic components and adjustments are readily accessible behind the front access door.

CML MACARR is a product line of Marine Electric Systems

PROXIMITY SENSORS



Marine Electric Systems Models 8-559, 8-560, 8-562, 8-563 Proximity Sensors
(All Metal Sensing Two Wire AC) 0.5" to 1.00" Sensing Range

Marine Electric Models 8-559, 8-560, 8-562 and 8-563 are two wire AC, solid state, self-contained electronic proximity switches designed for hostile shipboard environments. Stainless steel construction, as well as watertight integrity, makes these switches ideal for applications where reliable, accurate position sensing is required. The wide range of operating voltages allows multiple units in series. High EMI immunify enables units to be used topside in the presence of high power radio or radar transmitters. Simple two wire configuration allows direct replacement of mechanical.

These rugged and reliable sensors offer the following features:

- Operating voltage 24 to 124 VAC for series switch application
- 1.25 amp rms switch load rating
- High EMI resistance (high immunity to radio or radar interference)
- Two wire operation (direct replacement of mechanical switches)
- Over-current protection in case of shorted load
- DC Sensors also available

Techron gives you power you can trust. Not just because we say so, but because we've been in the controlled power source business for over thirty years. And in that time, we've learned how to build the best industrial grade, high efficiency linear power amplifiers.

Our amps are ideal for applications where clean, reliable, DC to 50kHz, high-current power is required.

In fact, one of modern medicine's most important diagnostic tools, the Magnetic Resonance Imaging gradient subsystem, is powered by Techron. Our gradient amplifiers are the choice of major MRI manufacturers—because Techron's advanced engineering combines the efficiency you might expect from switchers with the clean signal of linears.

Techron amplifiers serve as the signal source for testing aerospace electronic systems, and are even used to power tables in vibration analysis systems. In addition, they can be configured as a line voltage generator system for computers or automated test equipment.

If you see the specifications you're looking for, call us. If you don't, call us anyway. Our engineers will be happy to discuss your application requirements, be they off-the-shelf or custom.

- **Two isotropic probes cover over 6 decades (10 kHz to 1 GHz, 80 MHz to 40 GHz)**
- **1- to 300-V/m sensitivity**
- **Up to four independent inputs**

The first electric-field monitoring system to cover the entire rf spectrum to 1 GHz without bandbreaks or pauses for changing sensors, it now extends its coverage to 40 GHz with a second sensor, Model FP2080. Compact, advanced two-component system—sensor probe/transceiver inside the shielded room, master control outside.

Model FM2000 provides two digital (IEEE-488 and RS-232) outputs, two switch-selectable 0–4 Vdc analog outputs, high-field and power-loss alarm, LED display—all controlled at front panel.

Models FP2000 and FP2080 isotropic sensor probes communicate with control panel through 2-way fiberoptic cable. Up to four probes may feed field level information to the monitor from various points in the shielded room. Operator enjoys complete flexibility in choice of signal input for automated EMC testing.

Carefully constructed, using highest quality materials, these extremely small and lightweight Intervox devices are designed to fulfill limited-space requirements without sacrificing sound quality. Some are pin type units that are sealed for wave solder washing and are dispensed from auto insertion carrier tubes for P.C. applications. So, if you're looking for dependability and long life, Intervox miniatures are the answer.

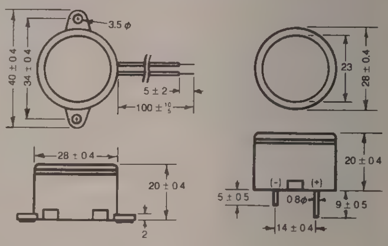
SERIES BRT2821



The Intervox Piezo-Electric series was created to provide the ultimate in buzzer technology. Distinctive in virtually any environment, it features a level of reliability, efficiency and clear, penetrating sound quality that is unavailable in ordinary buzzers. What's more, Intervox piezo-electric buzzers are offered in lightweight, compact packages. Some are self drive types and some with or without circuits.

ELECTRONIC BUZZERS

Designed to eliminate the problems inherent in electromechanical buzzers, Intervox solid-state buzzers are simple, rugged and low cost. Yet, they produce a rich, broad sound consistent with a wide variety of requirements. High efficiency, custom internal circuits deliver reliable performance and long life. And there are no mechanical points to arc or require maintenance. RF noise is non-existent.

MINIGLOSSARY
POWER SUPPLIES

Ambient reference: Refers to the temperature of the still air surrounding the power supply

Case reference: One of the specs that make up the nominal rating. The temperature of the case with the temperature of the surrounding still air at a stated temperature (usually 25°C).

Crowbar circuit: Protects the load. A protective circuit that applies a short circuit across the output immediately upon overload. (See overvoltage).

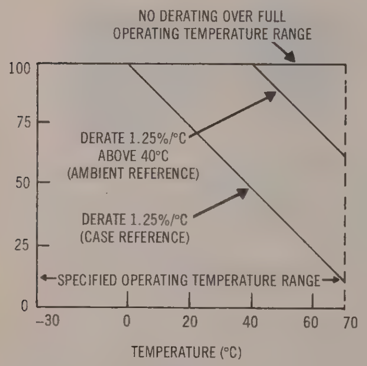

Fig. 1. Power output derating can be referred to ambient or case.

Derating: The degree output is reduced as temperature increases. Usually referenced to ambient case temperature and shown on a graph.

Efficiency: Ratio of the output power to the required input power. Usually expressed as a percentage given nominal environmental temperature.

EMI/RFI: Interference electronic circuitry caused by energy from electromechanical or radio frequency power supplies.

Foldback: Built-in protective circuits that automatically reduce the output voltage and/or current to very low levels in the event of an overload.

Holdover (Holdup): The interval that rated output will continue after input ceases. Usually milliseconds.

Input reflected current: The peak-to-peak alternating current generated by switching transients in DC/DC converters. Should not exceed 1%.

Inrush current limiting: Built-in circuits that monitor high currents through the rectifiers to the capacitors at turn ON. Circuit is usually inhibited as capacitors attain full charge.

Nominal rating: The spec value of the supply at stated conditions of input, output, and temperature.

Overshoot: A transient voltage change occurring during turn ON or OFF or during an abrupt load change.

Overvoltage (Overload) protection: Built-in circuits that protect the load or the supply by shutting it down or providing foldback.

Recovery: The time interval between the termination of an overload and restoration to normal operations.

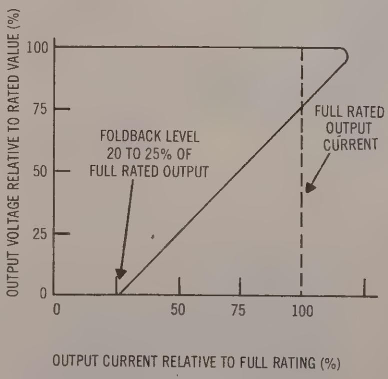

Fig. 2. Current foldback limiting self-resets with removal of fault.

Response: The time interval between a stated step change in input voltage or load current and return of output to normal operating conditions.

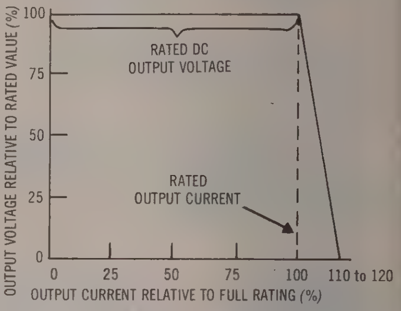

Fig. 3. Current limiting restrictions output current to a valve somewhat greater than full rated output; it resets when fault is removed.

Sensing: Regulation techniques that monitor output voltage and/or current. *Local sensing* refers to the output terminals. *Remote sensing* allows a feedback from the load circuit to the power supply.

Soft start: Allows the supply to start from zero current and/or voltage over a stated period of time during start up to prevent voltage overshoots and current imbalances.

Switchers: Power supplies using switching techniques to achieve high efficiency regulation. These techniques can have attendant EMI/RFI problems.

Tracking: The maintaining of fixed ratios between multiple outlets despite variations in line, load or temperature. Particularly important in supplies with symetrical (+)(−) outputs.

Transient protection: Circuitry designed to protect the supply from high amplitude line transients. Generally expressed in terms of peak voltage and maximum transient time duration.

FOR THE JAPANESE, *SHOKAI* MEANS INTRODUCTION

WHAT DOES *SHOKAI* MEAN FOR YOU? (HINT: IT MAKES YOUR IDEAS PROFITABLE)

Let's face it. As a source for electronic and electromechanical components, the quality and pricing of the Far East can't be matched on our side of the ocean. But you can't go to the Far East whenever you need to source a product.

That's why, if up to now, your knowledge of Japanese was limited to "sushi" and "sayonara", we respectfully suggest that you learn another word . . . SHOKAI®. . . Your introduction to the Far East.

SHOKAI® is an American company, with over 30 years experience manufacturing and importing components from the Far East. We were serving American manufacturers long before everybody with a fax machine and a foreign telephone book could claim to be an overseas supplier. And we will be here long after they are gone.

We speak your language. We understand you - your time frames - your requirements - your problems – the quality and personal attention you and your customers demand. As hundreds of "Top 500" companies have learned, let SHOKAI® be your source for components from Japan, Taiwan, Hong Kong and the rest of the Far East.

OUR PRODUCT LINE INCLUDES:

- Alarm & Signal Systems
- Antennas (Cordless Phone, Radio, Rubber-Ducky, Telescopic, UHF/VHF, Whip)
- Audible Alarms & Transducers
- Bells & Buzzers (Electronic, Electro-Mechanical and Piezo Buzzers, Piezo Elements, Sirens)
- Headphones
- Microphone Elements (Electret, Crystal and Dynamic)
- Meters (Ammeter, Audio, Battery, Edgewise, Moving Iron or Coil, Panel, Tuning, Level, Volt, VU)
- Speakers (Miniature & Subminiature)

And many more. Try us. You can start by requesting a catalog. Let us know what product you're looking for. Or better yet, tell us exactly what you want. You won't be disappointed.

Why don't you use your new word as soon as possible. You won't have to eat raw fish to try it. Just pick up your phone. We're waiting for your call.

DIMENSIONS (mm)

The Star SMX Series, a completely sealed audio transducer, is designed to provide an exceptionally wide frequency response range. A consistent pure tone signal allows the SMX to be used in a variety of applications. SMX transducers are also the first audio components specifically engineered to meet the requirements of automatic printed circuit board production. Forty SMX transducers are packaged in a rigid, plastic easy-feed magazine compatible with automatic insertion equipment.

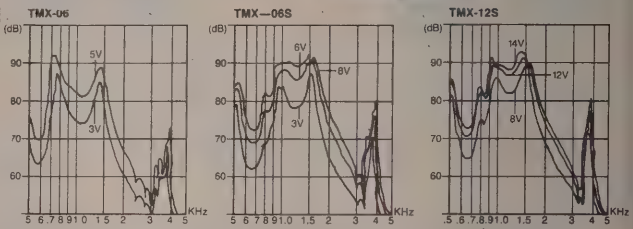
CHARACTERISTICS



The charts above represent the SPL characteristics plotted at minimum and maximum operating voltages throughout the frequency range.
TEST CONDITIONS: Square Wave, 50% Duty Cycle, measured at 10cm

The Star TMX Series are electro-acoustic transducers designed to produce a more pleasing, low frequency tone as an output. The TMX-06 is resonant at 730 Hz while the TMX-S models provide optimum performance between 1KHz and 1.5KHz. The basic TMX is available in only a nominal 5V DC package; the "S" type has nominal DC ratings of 6V and 12V.

AUDIO TRANSDUCERS WITH BUILT-IN DRIVE CIRCUIT

This series of transducers features built-in oscillation circuits to drive each unit at the correct frequency. They also allow operation from a direct voltage source and can replace older arcing type buzzers. The "pure tone" signal is at a basic frequency of 2200 Hz and is pleasant yet penetrating enough for alert/alarm functions.

BUZZERS AND TRANSDUCERS

BUZZERS MINIATURE SOLID STATE ELECTRONIC

Star's electronic buzzers utilize their patented solid state design and precise manufacturing that has made Star the world leader in this technology. The built-in oscillator circuit provides consistant sound output and eliminates RF noise associated with electro-mechanical design.

MMB - 01

Star's MMB series is the state-of-the-art in miniature electronic buzzers. Tiny size, high efficiency, and value are obtained through use of surface mount components in the drive circuits. As all circuitry is solid state, the MMB's simplicity of design provides high reliability not found in conventioinal "make and break" type alarms. There are no mechanical points to arc or require maintenance, and RF noise is non-existent.

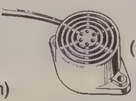
Star series CMB pin-type electronic buzzers fit standard DIP sockets or may be wave-soldered. Model CMB-06 is TTL compatible; Model CMB-12 is CMOS compatible. MMB and SMB series have lead wires.

RMB/IMB Series

IMB (∅41mm × 28mm)



RMB (∅41mm × 17.6mm)

Extraordinary audio penetration, long life and compact, rugged construction are combined in Star's unique Series of miniature electronic buzzers. Because all circuitry is solid state, Star buzzers differ significantly from conventional "make and break" type alarms. There are no mechanical points to arc or require maintenance and RF noise has been eliminated.

All three of the IMB Series are available in two models with different sound sequences.

- IMB-06-05, IMB-12-05 and IMB-24-05 emit sound for 1/4 second on, 1/4 second off.
- IMB-06-10, IMB-12-10 and IMB-24-10 emit sound for 1/2 second on, 1/2 second off.

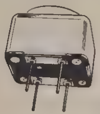
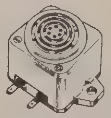
YMB/PMB Series



YMB (26L × 26W × 20H)



PMB (40L × 26W × 20H)

Star Series YMB and PMB are low-cost, precision-engineered solid state electronic buzzers which provide a minimum audible signal of 75 dB at a distance of 1 meter (39.4"). Each is available in four models rated at 3, 6, 12 and 24 volts DC. The YMB and PMB are similar in operating characteristics and performance, but provide different assembly options: Series YMB is a pin-type buzzer designed to be soldered directly to PC boards without additional wiring. Because the pins include a control, or "trigger" terminal with a maximum starting current of 1 mA, the buzzers create a perfect interface with integrated circuits. The control terminal is logic compatible. Series PMB has connector tabs which may be soldered or inserted in crimp-on connectors. It has flanges with screw holes and may be mounted firmly on any rigid, non-resonant surface.

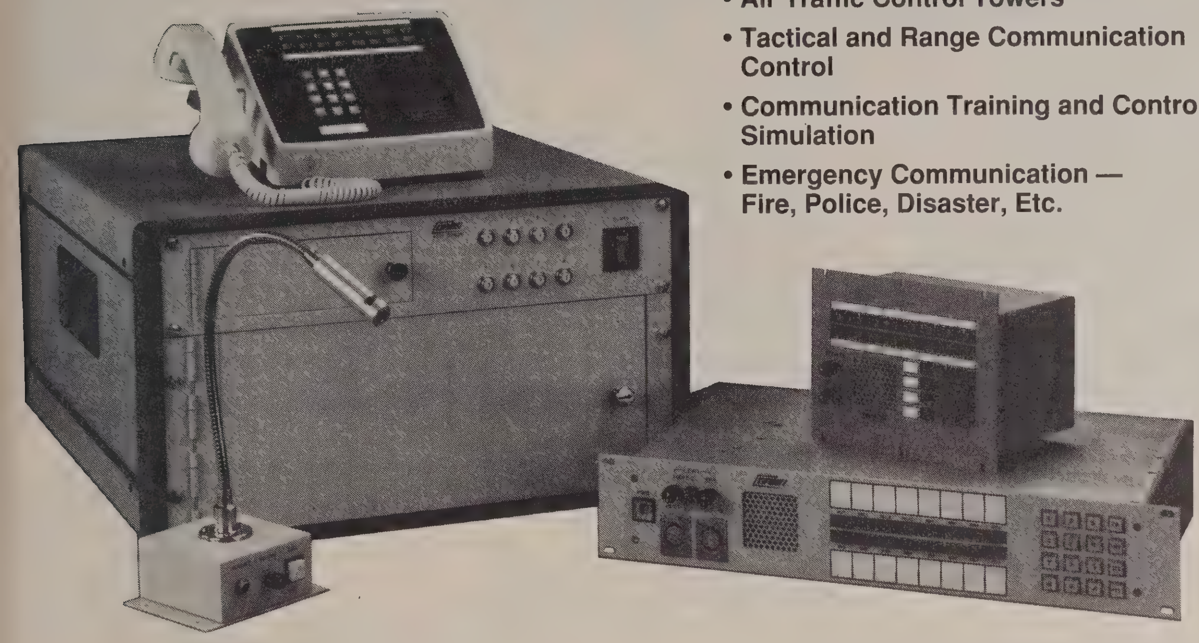
PROCOM-1400 SERIES

Integrated Communication Switching Systems For...

- Air Traffic Control Towers
- Tactical and Range Communication Control
- Communication Training and Control Simulation
- Emergency Communication — Fire, Police, Disaster, Etc.



Applications

PROCOM-1400 Integrated Communication Systems are ideal for small to large switching requirements where voice and data control from one or more operator positions are needed. Systems are typically used in command and control centers such as:

- Air Traffic Control Towers
- Tactical and Range Communication Control
- Communication Training and Simulation
- Emergency Communication — Fire, Police, Disaster, etc.

Small in size, the powerful PROCOM-1400 Central Control Switching Unit (CCU), along with multiple remote Communication Access Operator Units (CAU's), provides three primary modes of communications:

- Radio network control (ground/air/ground), local and remote
- Telephone communications with other facilities via dedicated point-to-point or switch network trunk facilities
- Intercommunications among system operating positions and stations

Overview

The PROCOM-1400 Series is a family of off-the-shelf, modularly constructed, Programmable Communication Switching Systems that are integrated in accordance with a user's specifications and needs. Using distributed "smart" electronic circuits along with redundant system power and efficient, high density packaging, the versatile PROCOM-1400 Series systems can provide just the right communication control system to fit any requirement.

As a fully developed, fully featured, console-controlled voice and data communications system, the PROCOM-1400 Series is capable of serving more than 400 subscribers (combinations of operator positions, radio devices, telephone trunks, and other external circuits).

All PROCOM-1400 Series system configurations use modular, distributed microprocessor supervision and control with the user's specific configuration protocol resident in solid state EPROM (Erasable Programmable Read-Only Memory). Most systems provide user access to real-time local configuration via nonvolatile RAM (Random Access Memory).

A representative PROCOM-1400 configuration is shown above.

MINIGLOSSARY
FIBER OPTICS

Acceptance Angle
The maximum angle within which light will be accepted by an element such as a detector or waveguide. In the latter, it is quantified as half the vertex angle of the cone within which optical power may be coupled into bound modes of a fiber.

Aligned Bundle
An assembly of fibers in which the coordinates of each fiber are the same at the two ends of the bundle, also called *Coherent Bundle*.

Bend Radius
The radius of curvature that an optical fiber can bend without breaking.

Bundle
Multiple optical fibers in a single housing used to transmit light or images.

Cladding
The low refractive index material that surrounds the core of the fiber to contain core light while protecting against surface contaminant scattering. In all-glass fibers, the cladding is glass.

Effective Numerical Aperture
The real numerical aperture of a fiber when the computed NA is not valid due to a change in the glass indices during the drawing and fusion process.

Fiber Bundle
A rigid, or flexible, concentrated assembly of glass or plastic fibers used to transmit optical images or light.

Fiber Optic Light Guide
A bundle of optical fibers arranged randomly for the purpose of transmitting energy, not images.

Fiber Optic Probe
A flexible optical probe having a bundle of glass fiber arranged to transmit an image

Gap Loss
The optical power loss caused by space between axially aligned fibers.

Image Transducer
Any arrangement of a bundle of optical fibers that alters the shape of the image.

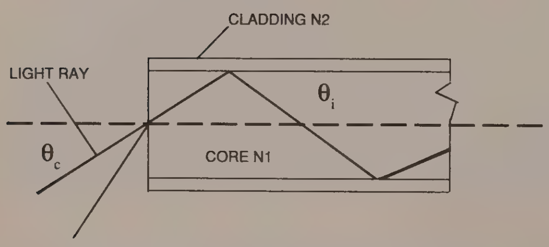
For example, by a systematic regulation of the spacing of the fibers from the entrance end to the exit end, a distortion of the image can occur that may be used to neutralize or compensate for the distortion introduced by the lens, prism or mirror components in an optical system.

Large-Core Fiber
Optical fiber with a large core, often a step-index fiber. "Large" is sometimes defined as greater than 85 µm.

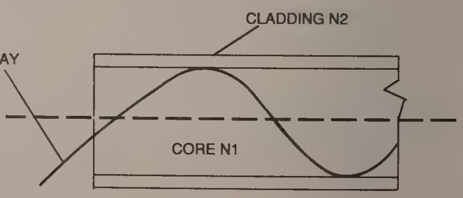
Multifibers
An array of optically distinct fibers that are fused into one strand. They are used to keep the resolution efficiency of the smaller single fibers and eliminate difficulty in handling. Their specific usage is determined by their flexibility or rigidity.

Packing Fraction
The ratio of the active core area of the fiber bundle to the total area at its light emitting or receiving end.

Plastic Fiber
Fiber in which both the core and cladding are made of plastic.



(a) Light propagation in a step index fiber.



(b) Path of light rays in a graded index fiber.

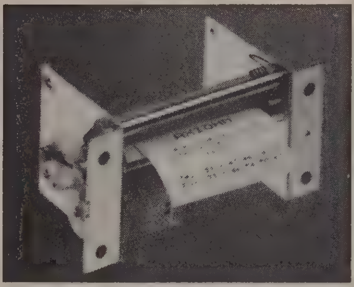
Kiosk printer

The kiosk printer uses an Axiohm print mechanism with a print width of 50.5 mm at a dot density of 7.6 dots/mm. This is mounted in a rugged metal frame that includes cutter, paper reservoir, presenter, controller board and power supply.

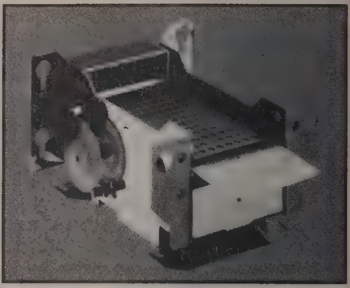
KIOSK PRINTER

The Axiohm kiosk printer has a paper stock external diameter up to 10" (2,800 ft roll) and a print speed of 3" per second.
It uses a RS232C or Centronics interface.



AUTO CUTTERS

Axiohm's patented ceramic cutter blades give a lifetime in excess of one million cuts in harsh environmental conditions.



DOCUMENT PRESENTER

The paper presenter transports documents directly to the user insuring proper delivery.

---

80 mm mechanism

The 80 mm mechanism is fast, printing up to 4.5" a second with high resolution (up to 8 dots per millimeter) graphic images.
It is also capable of handling a wide variety of media including label and ticket stock.
The flexible design of the Axiohm 80 mm allows it to handle two different widths of paper : 80 mm paper stock or two rolls of 40 mm paper stock.
This ultra compact, lightweight mechanism is extremely reliable and integrates easily into a host of designs.

You can combine the Axiohm's 80mm mechanism with power supply, integrated ceramic cutter and document presenter.
The result is an ideal printer for ATB, lottery, POS terminals, label printing, ticketing, medical equipment and other similar instruments.

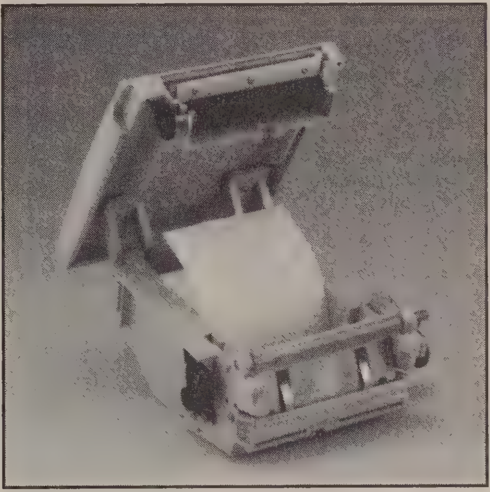
POS mechanism and/or complete Printer

The Axiohm POS printer makes paper loading simple :
1- open the cover
2- place the paper roll inside the printer
3- close the cover

The Axiohm POS printer is one of the easiest loading printers ever designed.

The Axiohm printer can sit on a counter or can be mounted on a wall for application where space is at premium such as ticket and teller booths.

As with other Axiohm mechanisms, the POS mechanism can integrate into a host of designs.



The POS mechanism is made up of 3 parts :

- **The printer chassis, incorporating the stepper motor and printhead. The chassis is also the paper reservoir.**
- **The 80 mm wide printhead (6 dots/mm)**
- **A cover, incorporating the platen roller**

The POS mechanism may be factory equipped with controller, and/or a ceramic cutter.

HTP 5V mechanism

If you are looking at a battery-powered hand-held application, the new Axiohm HTP (Hand-held Thermal Printer) is ideal for a wide range of hand-held products where low power consumption and ease of use are essential.

The Axiohm HTP is a compact, light weight thermal printer mechanism that provides fast and high quality graphic or alphanumeric output.

NOMOGRAPH VOLTAGE DROP

NOMOGRAPH OF VOLTAGE DROP ACROSS LOAD SUPPLY LEADS
(as a function of wire size and load current)

THIS NOMOGRAPH CAN BE USED TO FIND:

Maximum current carrying capacity recommended for any standard wire size.*

1) With a straight edge, connect from the wire size on Scale 2 to the point "A" on Scale 3.
2) Read I_{max} on Scale 1.

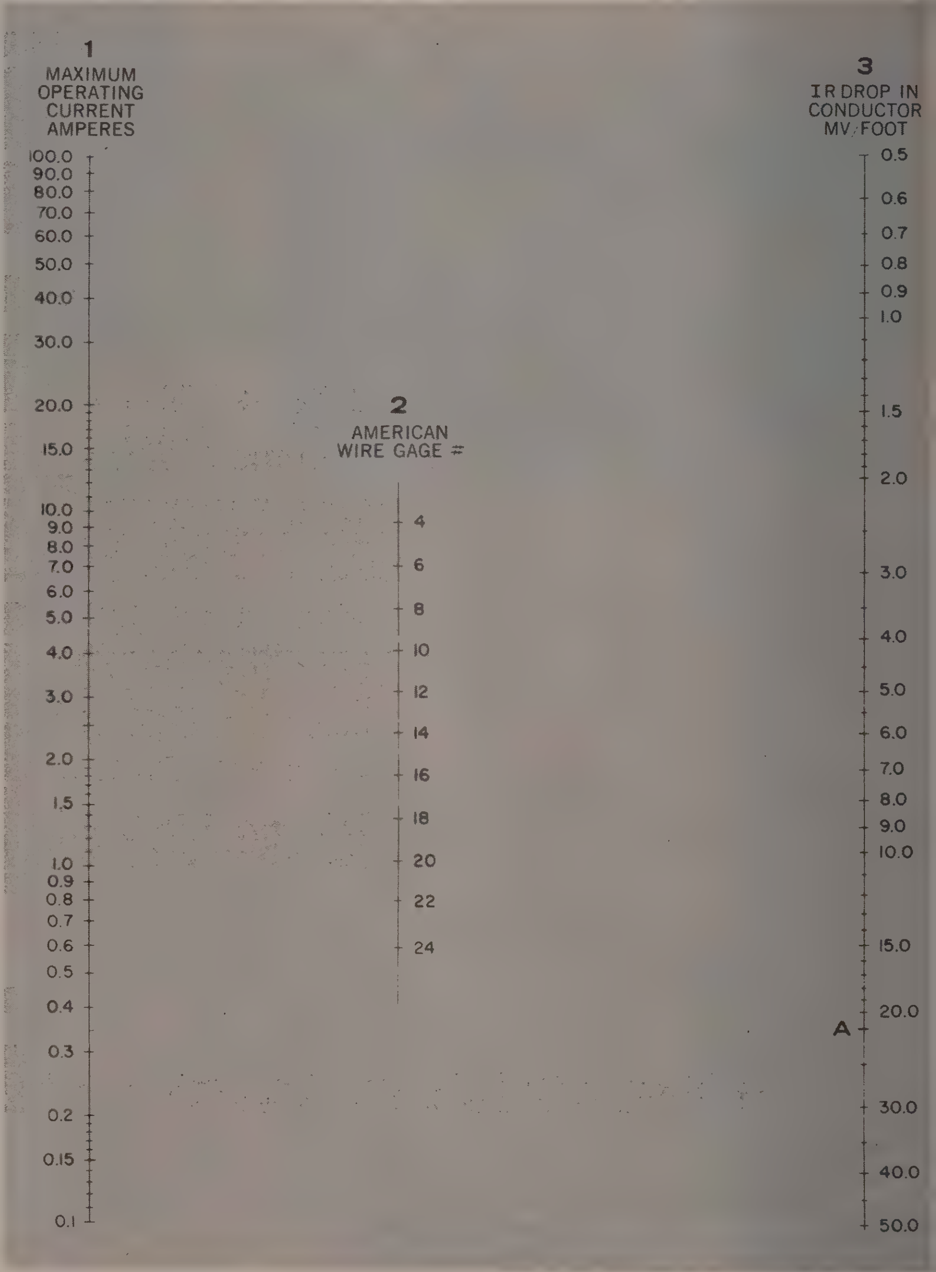
Voltage drop in millivolts per foot for known wire size and operating current.

1) With a straight edge, connect the known current on Scale 1 and the wire size on Scale 2.
2) Read voltage drop on Scale 3.

Wire size required for known operating current and known maximum tolerable voltage drop across supply leads.

1) Determine maximum tolerable drop in millivolts **per foot** of lead (sum of positive and negative leads).
2) Connect the value on Scale 3 (as determined in step 1) to the known current on Scale 1.
3) Read wire size on Scale 2.

** Based on an arbitrary minimum 500 circular mils per ampere. High-temperature class insulation will safely allow higher currents.*



NOTE: A voltage stabilized Power Supply controls the voltage across its output terminals. Hence, the wire conductors used to connect the load must be considered as part of the load. At high load currents, the voltage drop across the supply leads may appreciably degrade stablization at the load. Kepco models equipped with the *remote error sensing* feature can automatically compensate for voltage drops of up to 500 mV across each load supply lead.

A complete printer normally includes a print mechanism and a control board.

Reliable. All B-G Instruments' printers use fixed-dot, thick-film thermal printheads to achieve fast, quiet operation, long life and reliable performance.

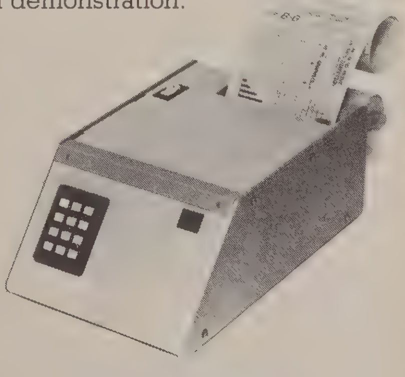
Powerful. B-G's standard DataPlot software makes it easy to print across the paper, print down the paper, and print while you plot data. Simple plotting commands produce curves, grids and bar graphs directly from the input data.

Versatile. For a moderate one-time fixed charge, any B-G printer can quickly be reprogrammed to meet the special requirements of a specific application. Custom character sets, printing stored forms with inserted data, clock/calendar functions, special calculations, conditional operations, these are but a few of the many features that have been included in specially programmed B-G printers.

THERMOGRAPH

Custom Instruments. The recording thermograph shown above is built around a DataPlot 1224-V printer with a custom control/interface board that performs A/D conversion, corrects for thermistor non-linearity, drives a panel display and provides the entire logic system. May we design an instrument for your application?

More Information. Detailed brochures, a price list and sample printouts will be mailed to you as soon as we receive your inquiry. If you have an upcoming OEM application, we would be pleased to discuss it with you in detail and arrange a demonstration.



Cabinets and power supplies are also available.

Timing Instruments

Bancomm manufactures a variety of rack mount timing instruments that utilize bus level modules packaged in a dedicated chassis. The **M80T Controller** performs a wide variety of time code translation, generation, and tape recorder control functions using plug-in STD bus modules. It has space for five optional modules and features a front panel CRT alphanumeric display for programming and data display. The **M80XT Controller** is similar; however it uses PC XT bus modules, can accept 12 optional modules, and features a front panel vacuum florescent display. The **M80T Sequencer** is a special configuration of the **M80T Controller** which maintains a countdown clock and initiates 16 external test events with millisecond resolution. The **M48 Controller** is another special configuration of the **M80T Controller** which generates and decodes time data inserted into and recovered from the M48 data block within AMPEX Corp High Density Digital Tape Recorders (HDDR).

3½-Inch 1GB Low Profile Disk Drives

0662 Models S12, S1D, SW1 and SWD

The 0662 is the industry's first 1.0 GB disk drive in the 1-inch high, 3½-inch form factor and the first of a new product family from ADSTAR*, IBM's storage products line of business. Using industry-leading areal density made possible by our exclusive Magnetoresistive head and second generation PRML (Partial Response Maximum Likelihood) channel chip, 1.05GB is packaged on just three disks. These technologies, combined with a simple and robust design, provide a unique combination of leadership in capacity, performance, reliability, and low power.

The 0662's formatted capacity is achieved using only two data zones, allowing a consistently high sustained data rate over the entire surface of the disk and making it a compelling alternative for data-intensive applications. It also provides the capacity, performance and packagability required for technical/commercial workstations, mini/mainframes, file servers, and arrays.

A simple design with few components and an automated manufacturing process combine to help the 0662 set a new standard for reliability with a projected 800,000 hours MTBF.

The 0662 is available with a SCSI-2 interface and comes in four models: 50-pin Fast Single Ended (S12), 50-pin Fast Differential (S1D), 68-pin Fast and Wide Single Ended (SW1), and 68-pin Fast and Wide Differential (SWD).

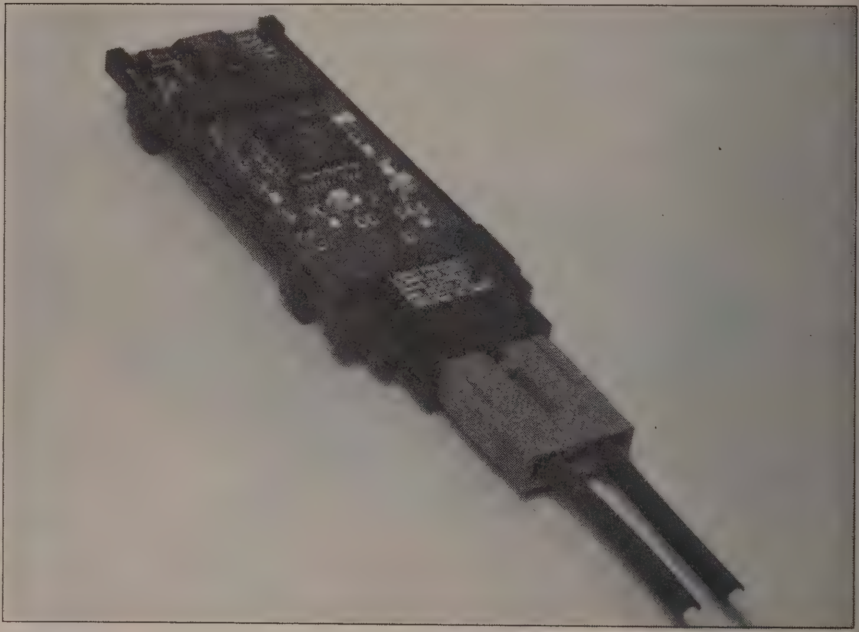
266 Mbps Optical Link Card

Fibre-optic technology for rapid, cost-effective transfer of data

The 266 Mbps Optical Link Card (OLC 266) is a laser-based data communications link that enables computer manufacturers to integrate low-cost, high-speed fibre-optic communications into computers and peripherals. The OLC 266 uses a high-reliability version of the same cost-effective shortwave lasers found in today's compact disc players.

The OLC 266 supports the American National Standards Institute's (ANSI's) emerging Fibre Channel standard. Fibre Channel is designed to provide a standardized protocol for system-level interconnect, while being flexible and cost effective. Fibre Channel was developed primarily to provide high-speed, medium-distance (less than 10 km) data links between host computers and peripherals (disk drives, printers, displays).

Because of its high speed and low latency, the OLC 266 is also useful for connecting two or more computers in shared computing and parallel processing environments.



Function

Encoded 10-bit data is serialized and converted into pulses of laser light for transmission into the optical fibre. These pulses are received by another OLC 266 and deserialized back into encoded 10-bit data along with the requisite synchronous clocking signals. Open Fibre Control (OFC) circuitry disables the lasers whenever there is a break in the optical link. These cards support continuous, full-duplex communication.

Highlights

- 266 Mbps transmission rate
- Up to 2 km distance
- Certified to be in conformance with international Class 1 laser safety regulations
- High-reliability optics
- Bit error rates lower than 10E^{-12}
- Low-loss SC type push-pull connectors
- Parallel 10-bit data I/O interface compatible with ANSI Fibre Channel standard 8B/10B encoding
- Double-sided surface-mount technology

19-Inch VGA Color Display and TouchSelect Feature

Custom Commercial Systems

The OEM version of the IBM* 7554 Commercial Systems 19-Inch VGA Display is designed to complement the family of IBM Custom Commercial Systems. The display provides 640 x 480 and 1024 x 768 pels definition. It can display up to 16 colors in standard VGA mode or 256 colors with the proper adapter. These colors are selected from a palette of 262,144 colors.

The 7554 is free-standing for use on the bench top, and, with the optional rack-mount feature, may be mounted in a standard EIA 19-Inch rack. Filtered cooling air allows continuous operation in environments with extended temperatures, particulates and vibration. For added convenience, the 7554 provides brightness and contrast controls as well as a power-on light emitting diode.

With it's hardened case, fan, filter and anti-glare screen, the IBM 7554 lets you bring the advantage of high-resolution to workstations into many environments.

Technical information

- Vertical scan frequency: 55Hz to 85Hz
- Resolution:
  - 320 x 200
  - 640 x 480
  - 1024 x 768
  - 720 x 400 (text mode)
- Dot Pitch: 0.31 mm
- Non-interlaced and interlaced operation

7554 TouchSelect

The 7554 TouchSelect* is a touch screen for the 7554 19-Inch display. It utilizes state-of-the-art IBM Strain Gauge technology. This technology allows the use of any input medium—finger, glove or stylus.

In addition to horizontal and vertical screen positions, the TouchSelect can measure the pressure applied to the screen. This allows the using program to emulate a mouse button or use the pressure applied directly in the program.

The easily installed TouchSelect requires no adapter card or separate power supply. A single cable connects the TouchSelect to a PS/2 mouse port.

Device drivers are available for DOS, OS/2 and DOS Windows** 3.0.

Product description

The environmentally hardened RISC System/6000 Models 340R and 350R bring the power of IBM's advanced RISC technology to a wide range of field applications. This equipment is commercial-off-the-shelf (COTS) operating hardware that has been repackaged to perform in hostile environments.

Models 340R and 350R maintain 100 percent functional equivalency with their standard counterparts, RISC System/6000 Models 340 and 350. Both environmentally hardened units support the same Micro Channel® interface adapter cards, memory upgrades and options used in the standard Models 340 and 350. The only exception is the hard disk—Models 340R and 350R do not support the 160MB hard disk.

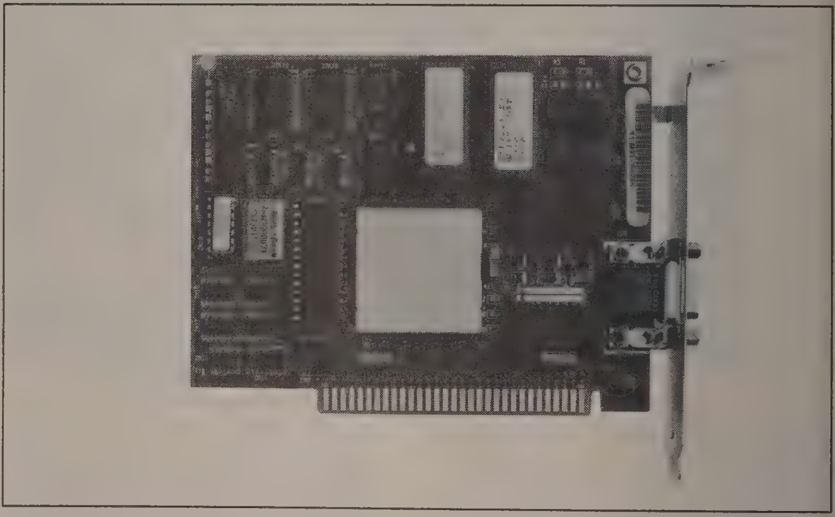
Token-Ring Network 16/4 Adapters

IBM offers OEM versions of its best-selling Token-Ring Network 16/4 Adapters.

The Token-Ring 16/4 Adapter and Token-Ring 16/4 Adapter II attach a host system, using an Industry Standard Architecture (ISA) bus to a Token Local Area Network operating at either 4 or 16 Mbps.

The 16/4 Adapter is a companion to the 4Mbps IBM* Token-Ring Network PC Adaptor II. It is the ideal choice for DOS users with memory constraint considerations, since it requires less workstation memory than the Token-Ring Network 16/4 Adapter II.

Token-Ring 16/4 Adapter II supports PS/2* and PC workstations with 16-bit ISA buses and provides enhanced data transfer capabilities on ISA machines. These capabilities make possible increased throughput by allowing adapter-to-system-memory data transfer independent of the host processor. The host processor is then available for other tasks.



The Token-Ring 16/4 Adapter II also provides Unshielded Twisted Pair (UTP) support at both 4Mbps and 16Mbps. This allows the option of using either cost-effective telephone twisted-pair media or advanced IBM Cabling System Shielded media (STP) for network wiring. UTP filters are standard for Adapter II.

The Token-Ring 16/4 Adapter/A (Micro Channel*) attaches a host system using IBM PS/2 Micro Channel Architecture, to a Token-Ring Local Area Network operating at either 4 or 16 Mbps. It is switchable by software and is changed as part of machine setup during the power-up sequence.

Highlights

- Operates at either 4 or 16 Mbps
- Max frame size is 18K at 16Mbps and 4.5K at 4Mbps
- Max link stations (sessions) is 254
- Adapter and ring diagnostics supplied
- Early Token Release supported at 16Mbps
- Requires a customer-supplied attachment cable, IBM PN 6339098 or equivalent
- Conforms to IEEE 802.5
- FCC Operating Class A
- Occupies a single adapter slot
- Provides Remote Program Load (RPL) (optional feature on the 16/4 Adapter)
- Early Token Release at 16 Mbps

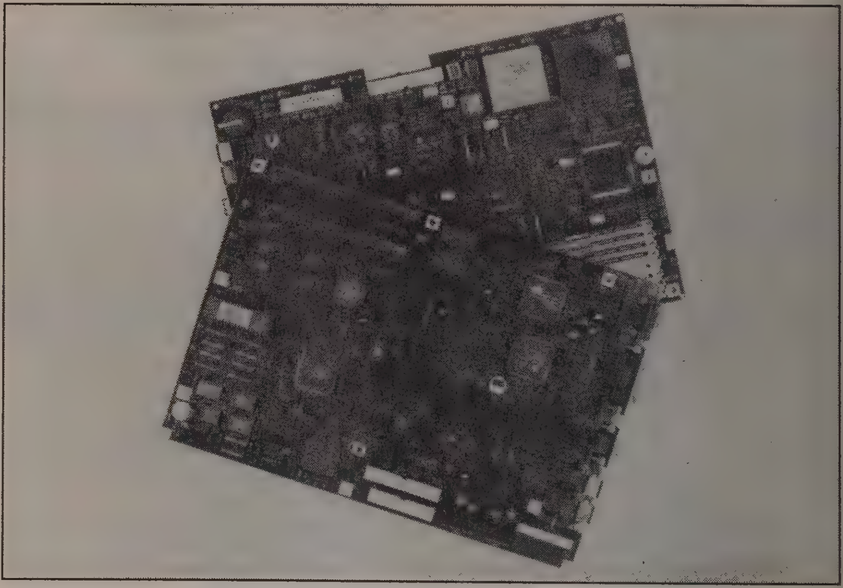
Motherboards



IBM offers the OEM market a wide range of motherboards in both Micro Channel* and AT* designs. The processors in these boards are from IBM and Intel** and range from a 386SLC-25 to a 486DX2-33/66.

IBM's new SLC performance processors, 386SLC and 486SLC, have double clocking, on-chip cache and optimized instructions. With these features, the new IBM-designed motherboards outperform their industry couterparts while providing compatibility and price points that fit the OEM marketplace.

Intel's 486 processors provide speedy, reliable performance today, plus a growth path for the future. Motherboards are available with the Intel 486SX-25, 486DX-33 and 486DX2-33/66 processors.

Compatibility is viewed in several ways. First, our processors are either from Intel or completely compatible (as certified by Intel) with Intel instruction sets. This allows for attachment to a variety of motherboards and provides upgradeability on the same motherboard. This is particularly true with the IBM 386SLC and 486SLC2.

Second, application compatibility is preserved. By upgrading to a faster processor, the same applications usually run faster. And this is done without the need to change operating systems in the case of the processors that have 32-bit internal and 16-bit external data paths.

The IBM 386SLC and 486SLC2 lead the way from a price point of view. They combine high-speed features with low operating cost to provide excellent price performance. These also provide an upgrade plan, and future upgrades will follow IBM's upgrade strategy.

Innovative technology

The breadth of the IBM processor and motherboard offerings provides technology that supports many areas of the marketplace. The innovative technology of the IBM SLC processors supports low-power applications such as laptop and notebook computers, while providing speed comparable to some 32-bit processors. Other 32-bit processors support multitasking applications. All in all, IBM processors and motherboards provide a wide range of technology from price sensitive markets to performance-intensive environments.

Flexibility

With Intel compatibility, you can mix and match processors and motherboards to meet the needs of most environments. Flexibility of design allows for a mix of motherboard components that helps match current standards and provide compatibility with installed equipment.

Investment protection

With the IBM processors and motherboards, you can provide cost effective performance to your customers whether in the Micro Channel or AT environment. Both your investment and your customer's investment are protected through upgradeability designed into our processors and motherboards.

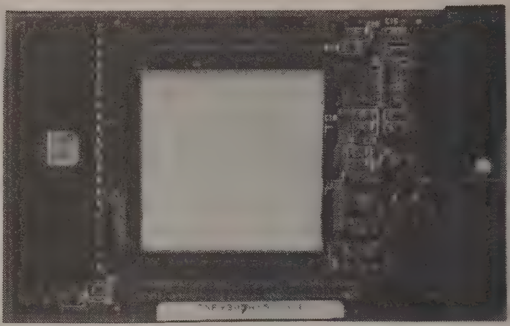
16/4 Mbps Token-Ring Mini-Card

The Token-Ring Mini-Card (daughter board) has communication chip technology equivalent to that which is presently available on IBM's 16/4 Mbps Token-Ring PC/AT® and Micro Channel® cards. This technology includes read only memory (ROM) and front-end analog circuitry. The Mini-Card mounts on a host card that must contain the additional components needed to achieve a fully functional adapter. The Mini-Card microcode supports MAC, LLC and Bridge Source Routing.

For other unique system interfaces, vendors can design their own custom logic to adapt to the mode that best fits their applications.

Vendors must provide the front-end connector Adapter Identification Prom (AIP), external jumpers, data buffering, 32 MHz oscillator and RAM in order to obtain a fully functional Token-Ring card.



Highlights

- Memory Mapped Input/Output (MMIO) shared interface
- Programmable for three different modes:
  - –IBM Family: PC/AT 8-bit bus or 16-bit generic bus
  - –Motorola 68000: 16-bit data bus
  - –IBM Micro Channel: 16-bit data bus

Specifications

16/4 Mbps Token-Ring Mini Card		
Physical Dimensions	102.4 mm x 63.5 mm (4.02 in x 2.5 in)	
	Height above base card: 14.4 mm maximum; 13.6 mm nominal	
Interface Buses	Host Interface	1M addressability
		Byte/half-word data bus
	Local Memory Interface	64K-byte addressability
		16-bit data bus with or without parity
		Parity required
Power requirements	Card power supply voltage is 5VDC ±5%	
	Power consumption is 2.75W typical, 4.0 maximum	
	TTL signal levels	
Operating Environment	Air temperature	15.6°C to 32°C (60°F to 90°F)
	Relative humidity	8 to 80%
FCC Electromagnetic Radiation	The Mini-Card is a "subassembly" and cannot be given an FCC rating. However, a PS/2*-25 using a Token-Ring adapter incorporating the Mini-Card successfully passes FCC Class A and German Class B (GOP).

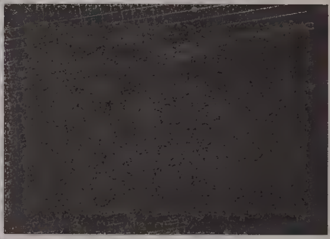
OrCAD: the next chapter

As designs become more complex and time-to-market decreases, new tools are needed to keep up with the technology.

OrCAD's new line of products offer the same user interface that has made them the world's most popular EDA tools, plus unprecedented speed and capacity.

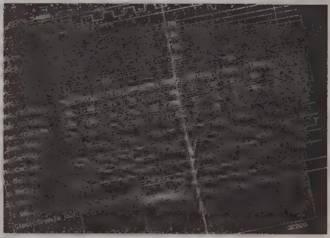
Schematic Design Tools 386+

A 32-bit version of the world's most popular schematic design tools, designed specifically for 386 and 486 based computers. Powerful enough to design the most complex PCBs and FPGAs, yet easy enough to use for the simplest schematics. SDT 386+ comes standard with 20,000+ unique library parts, 30+ netlist formats and all the features and utilities you need.



Programmable Logic Design Tools 386+

The best tool on the market for writing logic programmable chips (FPGAs, PLAs, PLDs, GALs, etc.). The compiler accepts seven forms of input including Boolean equations, truth tables, state machine procedures, logic synthesis; even schematics from Schematic Design Tools 386+. Compatible with thousands of programmable devices. Output can be accepted into OrCAD's Digital Simulation Tools 386+ for accurate simulation of designs with multiple programmed PLDs.



Digital Simulation Tools 386+

This timing based, 12 state, event driven simulator allows simulation of digital designs of up to 200,000 gates. The PLD modeling capability enables simulation of multiple PLDs in a single design. Hundreds of models are included and new models can be created by the user to support new technologies. Thanks to OrCAD's intuitive ESP Framework, Digital Simulation tools 386+ works seamlessly with other OrCAD products.

CLOSED LOOP CURRENT SENSORS

The closed loop current sensor consists of a coil wound around a magnetic core, a Hall generator placed in an air gap of the core, and an amplifier which drives the coil. The current in the coil sets up a magnetic field which opposes the field produced by the current carrying conductor placed through the aperture of the sensor. The Hall generator provides the feedback needed to keep the flux in the core at zero. The output is current proportionate to the current through the aperture.

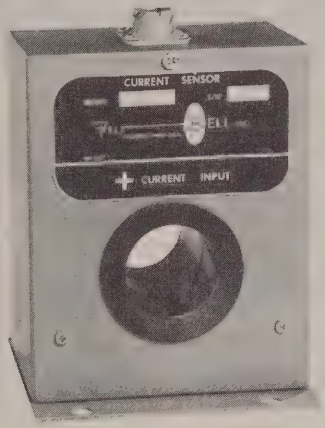
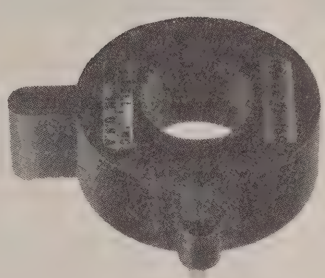
ac & dc HALL-EFFECT CURRENT SENSORS

IF



IA



PI (PC board mountable)

DESCRIPTION

F.W. Bell current sensors measure ac and dc currents with the advantage of electrical isolation between the output of the sensor and the current carrying conductor.

FEATURES

- Electrical isolation
- Zero dc insertion loss
- Ability to measure complex waveforms
- Special models available

TYPICAL APPLICATIONS

- Motor Drives
- UPS Systems
- Power Supplies
- Battery Chargers
- Replacement for Shunts

OPEN LOOP CURRENT SENSORS

The open loop current sensor consists of a Hall generator inserted in an air gap of a magnetic core with associated circuitry used to amplifier and temperature compensate the output of the Hall generator. The current sensor's output is a voltage proportionate to the magnetic field produced by the current carrying conductor placed through the aperture of the sensor.

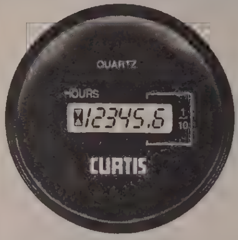
CURTIS

CURTIS 700 SERIES SOLID-STATE HOUR METERS



Designed to outlast the equipment they monitor, 700 Series hour meters cost less than units they replace. Built with customized, dedicated microchip technolgy, they are crystal quartz-driven with totally solid-state circuitry. Housed in a sealed module with LCD readout, they have *no moving parts*. Available for DC or AC, their non-volatile memory holds data *without battery or power* for as long as required. CURTIS 700 Series tolerate extremes of shock, dust, vibration, moisture and temperature (-40°C to 85°C). Shallow-depth housing permits easier installation. Voltages from 6VDC to 220VAC (50, 60Hz).

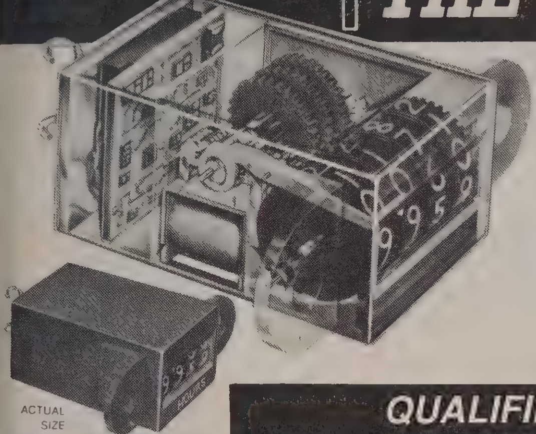
THE DYNATIME Series



ACTUAL SIZE

SUBMINIATURE ELAPSED TIME INDICATORS

The NEW INDUSTRY STANDARD in ETI technology . . . with CMOS microelectronics that delivers precisely controlled power to the patented stepper drive module. Summarily, a remarkably efficient system that has proven its versatility. For example, Models D76 and TTL-compatible D46 are proven performers from logic buss or low-voltage DC power. Or take advantage of Model D16's stability between 10 and 34 VDC. It is now qualified to new MIL-M-7793E, as is the down-sized 60 Hz Model D92. All are POWER MISERS, with expanded voltages to match today's tougher equipment specs. And the SHORT CASES will SAVE SPACE, too. That's DYNATIME versatility . . . you can rely on it.

QUALIFIED TO MIL-M-7793

MODEL D16 (12 & 28 VDC)
New M7793/1 & /2, Short
New MS21341A (Short) & B (Long)
New M7793/5, Long (was MS17321)

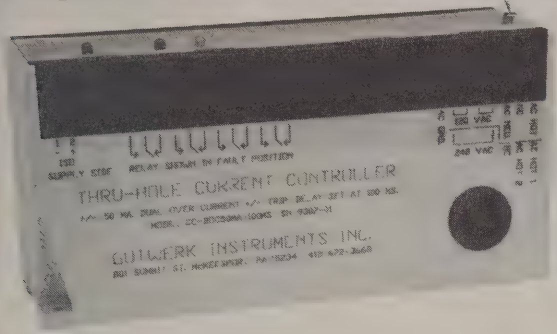
Failsafe Sensor/Controllers

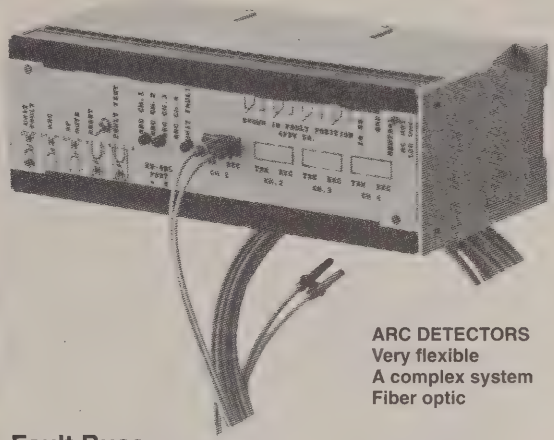
"Expansion, Reliability and Flexibility Are Designed In"



Fail-Safe Operation

All units are fail-safe. Each unit is continuously self testing, *(even while in use!)* to assure that it will detect a fault condition when it really counts. • A wide range of settable fault options. • LEDs provide a local indication of status, with a local reset switch. • 4PDT relay and optoisolators provide output status and remot inputs for all functions. • An isolated power source is provided to assist the user in setting up remote control operation. • Using high reliability Schindengen DC-DC converters throughout.

• Optional RS-485 Interface is also available. •
If you want to know your fault protection will be there when you need it, this is the unit for you!



ARC DETECTORS
Very flexible
A complex system
Fiber optic

Fault Buss

This is very useful feature found on all our units. By connecting the FAULT BUSS of any number of units together, a complete monitoring system is formed. When any unit sees a fault the FAULT BUSS will command all units to "Hold" the analog data it contains at the "Real Time" of the fault. This enables the operator to analyze all monitored points at the time of the fault. It also assists a computer operated or monitored system to scan all controllers without missing data that results from speed related problems.

All units can be bussed together

Thru-Hole Current Sensors

- Low power consumption
- True Type II tracking converter
- Industry standard pin-out
- 1000% overvoltage protection
- Insensitive to amplitude and frequency variations

APPLICATIONS

- Radar tracking systems
- Navigation systems

The unit is contained in a 1/2- or full-ATR chassis (depending on internal space requirements) conforming to Military Standard MS91403 (ATR type) requirements. Basic circuitry and optional features are mounted on individual circuit cards to facilitate both maintenance and future expansion.

The basic unit is driven by a temperature compensated, crystal controlled oscillator and produces 1-, 10- and 1k-pps pulse rate outputs. A nine-digit LED time display is located on the front panel. Input power requirement is +28 Vdc. All electronic components are mounted on plug-in PC boards to facilitate maintenance and future expansion.

Model 9150-406 Time Code Generators

Model 9150-406

This unit is smaller than the Model 9150-100, but still offers a comprehensive list of capabilities. Basic outputs include modulated IRIG B time code, 1-, 1k- and 1M-pps pulse rates, and 30-bit parallel BCD time data.

The generator can be automatically synchronized to an incoming IRIG B signal or manually reset for elapsed time applications. Several functions can also be remotely controlled via dedicated input lines. Input power requirement is +28 Vdc. A rechargeable battery supply is also included. The unit measures 4" high, 5" wide and 8" deep.

Model 9150-300 Time Code Generators

Model 9150-300

Measuring just 2" high, 5" wide and 4" deep, this light weight, microprocessor controlled instrument is designed for installation in confined spaces. The unit generates a modulated IRIG B time code output and features a nine-digit LED time display. CMOS microcircuits minimize space and power requirements.

The unit operates on +12 Vdc power, and is equipped with a Nicad battery supply for continued operation in the event of a power failure.

Model 9150-3000 Time Code Generators

Model 9150-3000

Its miniature size (2-3/4" high, 3" wide, 5-3/4" deep) makes this instrument an ideal candidate for applications involving airframes, remotely piloted vehicles, etc. The unit generates modulated IRIG B time code, and operates on either +12- or +28-Vdc power. An internal battery supply is included.

Time Code Translators, Readers, Displays

Model 9200/9210 Time Code Translators

This unit is ideally suited to applications requiring precise time code translation, coupled with low cost, high reliability and space for a limited number of optional features. Configured to read the standard IRIG B code format, the basic Model 9200 includes a front panel display and TTL-compatible, multiple-rate pulse train outputs. Wide band input, automatic forward/reverse code translation and digital error filtering make the unit particularly useful for high-speed tape search operations. Measuring just 1-3/4" high, the chassis is designed for mounting in a standard 19" equipment rack.

The Model 9210 includes all the features of the Model 9200, with increased chassis space and added internal power capacity. In its basic configuration, this unit translates multiple IRIG time code formats, and produces multiple-rate pulse trains and a 42-line parallel BCD output reflecting encoded time. Available in 3-1/2" and 5-1/4" high chassis configurations, the Model 9210 accommodates a greater number of optional features than the Model 9200.

Model 9500

Model 9520 Time Display

The Model 9520 reads an IRIG A, B or E modulated time code signal (as optionally defined) in order to display time information in installations involving long distances and/or multiple sites. A modulated code signal transmitted over a single transmission line is much more satisfactory for a widely distributed network.

A 30-bit parallel BCD time output is provided via a rear panel connector. LED display elements are employed in sizes ranging from 0.4" to 2.0" and larger. The unit measures 1-3/4" or 3-1/2" high and is designed for mounting in a standard 19-inch equipment rack.

Model 9520

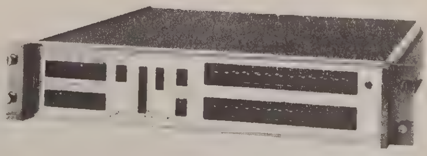
Tape Search and Control Units

Model 9241 Tape Search and Control Units

This unit provides all control functions required by an instrumentation tape transport to locate a segment of tape defined by preselected start and stop times. By comparing its start/stop time switch settings with translated time code from the data tape, the 9241 exercises precise control over the transport to conduct an automatic forward/reverse search operation.

Microprocessor control and modular construction provide high reliability, enhanced field maintenance capability, and future expandability. The unit measures 3-1/2" high, 17" wide and 18" deep, and is designed for mounting in a standard 19-inch equipment rack.

Remote operation via RS-232, IEEE 488 or General Purpose Input/Output interfaces are optionally available.



Model 9241

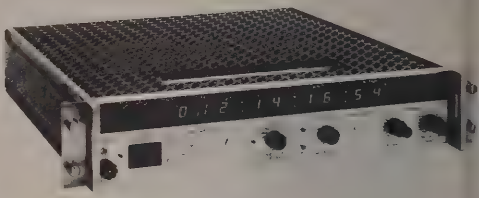
Multifunction Instruments

Model 9300/9310 Time Code Generator/Translators

The Model 9300 combines the primary functions of the 9100 and 9200 to provide generation and translation of the IRIG B time code. Multi-rate pulse trains (1k, 100, 10 and 1 pps) are also generated by the basic unit. Designed for mounting in a standard 19" equipment rack, the unit measures just 1-3/4" high. A nine-digit LED display reflects translated or generated time, depending on the selected mode of operation. Each digit can be preset by the operator. All controls and indicators are located on the front panel.

The Model 9310 includes all the features of the 9300, with increased chassis space and added power capacity. In its basic configuration, this unit translates multiple IRIG time code formats, and produces multiple-rate pulse trains and a 42-line parallel BCD output reflecting encoded time. Available in 3-1/2" and 5-1/4" high chassis configurations, the Model 9310 accommodates a greater number of optional features than the Model 9300.

Model 9300



Model 9310

Model 9340 Service Qualified Timing Subsystem

The only equipment of its type to meet MIL-E-16400 requirements, the Model 9340 Timing Subsystem (TD-1307/U) is service qualified for shipboard operation. The unit generates and translates IRIG B time code and conducts automatic tape search operations. Internal circuitry is mounted on a series of plug-in modules. Each module also includes self-test circuitry to check for proper operation and display test status information. The Model 9340 is designed for mounting in a standard 19" equipment rack and measures 7" high.

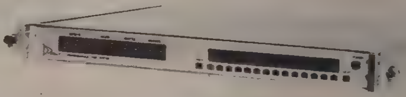
Model 9700/9710 Programmable Time Systems

The Model 9700 is available as either a time code generator or generator/translator, suitable for data correlation, magnetic tape recording, etc. Tape search capability can also be included. Microprocessor based design and modular construction provide high reliability, user friendly operation, expandability and compact size. All setup data and status indications are shown on an alphanumeric display, which also prompts the operator through the various programming procedures required for setup and operation. Diagnostic self tests are automatically performed each time power is applied. Time is continuously visible via the LED display.

The Model 9710 includes all the features of the Model 9700, with increased chassis space and added internal power capacity.

The basic generator function produces IRIG B code. Seven variations of the IRIG code can be processed by the translator. Both units are designed for mounting in a standard 19" equipment rack. The 9700 measures 1-3/4" high and the 9710 is 3.5" high.



Model 9700

Model 9710

Synchronized Time Code Generators

Synchronized Time Code Generators are designed to generate IRIG time code either in the normal fashion or in synchronism with an incoming IRIG time code signal. In the synchronized generator mode, the internal clocking oscillator is servo controlled to maintain phase coherency with the input time code. This produces IRIG time codes and multiple pulse rate outputs in synchronism with the input code. Generation will continue even if the input code is interrupted.

Units are available either as dedicated instruments (the Model 9390 Synchronized Time Code Generator), or as derivatives of other equipment such as the Model 9100, 9300 or 9700. Designed for mounting in a standard 19" equipment rack, chassis range in height from 1-3/4" to 5-1/4".

Model 9390 GPS Time/Frequency System

By monitoring code transmissions from Navstar satellites in the GPS constellation, Datum's 9390 family of GPS receivers offers convenient, on-site access to time and frequency data of unparalleled precision, anywhere on earth. These instruments have enjoyed wide acceptance in the time and frequency community and have opened a host of new possibilities to instrumentation professionals.

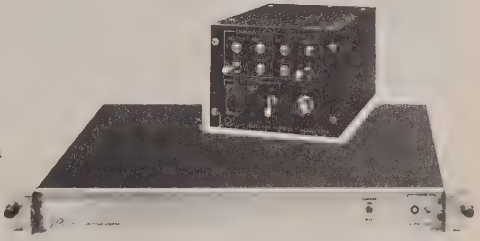
Dual channel design enables the 9390 to function as a time and frequency measurement device equally well in dynamic (vehicle speeds up to 600 knots) and fixed-platform installations. Retention of time and almanac data enables the unit to perform visible satellite acquisition in less than two minutes. Geographical position in latitude, longitude and altitude (WGS 84) is determined automatically via an internal position locator algorithm.

Two types of packaging are available – a 19" rack mounting or tabletop unit, and ruggedized versions for portable or mobil applications. In either case, the receivers are completely self contained except for their antenna/preamp assemblies. The antenna/preamp assemblies are very compact (1.5" high, 4.75" wide, and 4.0" deep, including base) and weather proof, and can be installed in any location providing line-of-sight reception.

Model 9390 GPS Receivers

Video Time/Data Inserters

Video Time Inserters insert translated IRIG B time information into a composite video signal, thereby enabling time to be displayed on a video monitor or television screen. With a time tag in every frame, the video data can also be correlated with various system elements, such as strip chart recorders, printers, magnetic tape units and computers. Units are available in a variety of configurations, ranging from plug-in PC boards to miniaturized airborne units. Optionally, a line of up to 16 alphanumeric characters can be inserted immediately below the time word.



Video Time/Data Inserters

Video Data Encoders and Readers

These units permit digital information to be transmitted within a composite video signal in a manner that is completely transparent to the viewer. The basic characteristics of the video signal remain unaffected.

The Video Data Encoder converts parallel input data into a Datum serial NRZ format. The data, representing up to eight consecutive lines of information, is inserted into the vertical blanking interval of the composite video signal for transmission to a video recorder or remote receiver. The Video Data Reader extracts the encoded information from a received video signal and converts it to an eight-bit parallel format meeting the requirements of most computer interface specifications.

Both the Encoder and Reader are contained in a 1-3/4 inch high chassis designed for mounting in a standard 19" equipment rack.

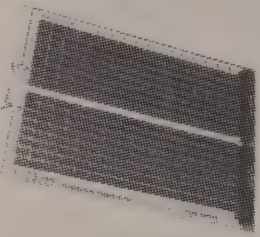
9000 SERIES

MATRIX SWITCHING SYSTEMS

ITI's 9000 Series matrix system incorporates the HIGHEST CROSSPOINT DENSITY of all ITI's matrix switching systems. It was specifically designed to meet the growing demand for large scale (up to 3000 inputs x 3000 outputs) but affordable matrix switching.



Has features of 8500 series and:

- Sizes up to 3000 inputs x 3000 outputs

LOW LEVEL ANALOG and DIGITAL SCANNERS by MATRIX CORPORATION

Low Level General Instrumentation

MODEL 1701 SCANNER

Random access: Channels selected by manual front panel switch, remotely by-parallel BCD, IEEE-488 or RS 232C.

GENERAL: Scan voltages from microvolts to 300 volts. Microprocessor based interface provides two-way communications with a computer via IEEE-488, RS-232C or parallel BCD.

COMPUTER INTERFACE: parallel BCD std., optional IEEE-488 or RS232C.

CAPACITY: 10 to 999 channels — master 10 to 100 channels, slave units add 10 to 200 channels each. Master and slave require 3½" std. rack space.

NUMBER OF POLES: 3 to 100 per channel.

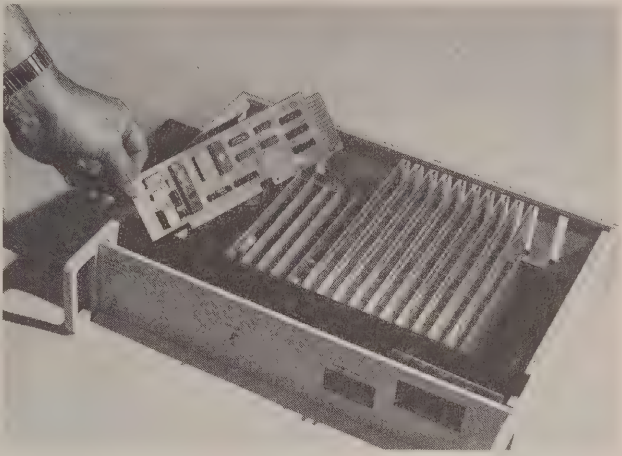
SWITCHING RATE: to 200 channels per second.

CONTACT RATINGS: Microvolts to 300 volts

DISPLAY: 7 segment LED — 3 digits for channel, 4½ digits for data.

DIMENSIONS: 3½" high x 17" wide x 10" deep.

USES: Reading tranducers, thermocouples, RTD's, switch positions, BCD and binary data lines.



Shown with the Model 1701 Scanner is the Computer Interface Board.

OPERATION FROM A COMPUTER: Commands such as SELECT CHANNEL and SEND DATA are accomplished by two-way communications between a terminal or controller and the Model 1701 using ASCII. Send "25C" to select channel 25. Send "I" to have the scanner respond with 4½ digits of data, sign and decimal point.

MINIGLOSSARY POWER SUPPLIES

Ambient reference: Refers to the temperature of the still air surrounding the power supply

Case reference: One of the specs that make up the nominal rating. The temperature of the case with the temperature of the surrounding still air at a stated temperature (usually 25°C).

Crowbar circuit: Protects the load. A protective circuit that applies a short circuit across the output immediately upon overload. (See overvoltage).

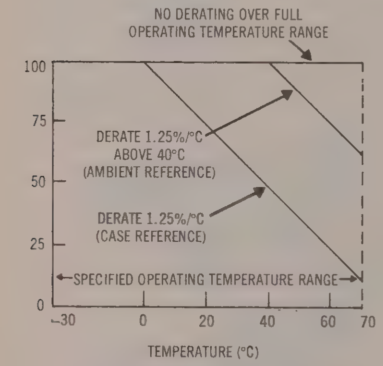

Fig. 1. Power output derating can be referred to ambient or case.

Derating: The degree output is reduced as temperature increases. Usually referenced to ambient case temperature and shown on a graph.

Efficiency: Ratio of the output power to the required input power. Usually expressed as a percentage given nominal environmental temperature.

EMI/RFI: Interference electronic circuitry caused by energy from electromechanical or radio frequency power supplies.

Foldback: Built-in protective circuits that automatically reduce the output voltage and/or current to very low levels in the event of an overload.

Holdover (Holdup): The interval that rated output will continue after input ceases. Usually milliseconds.

Input reflected current: The peak-to-peak alternating current generated by switching transients in DC/DC converters. Should not exceed 1%.

Inrush current limiting: Built-in circuits that monitor high currents through the rectifiers to the capacitors at turn ON. Circuit is usually inhibited as capacitors attain full charge.

Nominal rating: The spec value of the supply at stated conditions of input, output, and temperature.

Overshoot: A transient voltage change occurring during turn ON or OFF or during an abrupt load change.

Overvoltage (Overload) protection: Built-in circuits that protect the load or the supply by shutting it down or providing foldback.

Recovery: The time interval between the termination of an overload and restoration to normal operations.

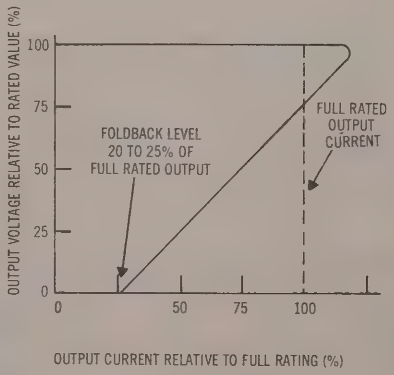

Fig. 2. Current foldback limiting self-resets with removal of fault.

Response: The time interval between a stated step change in input voltage or load current and return of output to normal operating conditions.

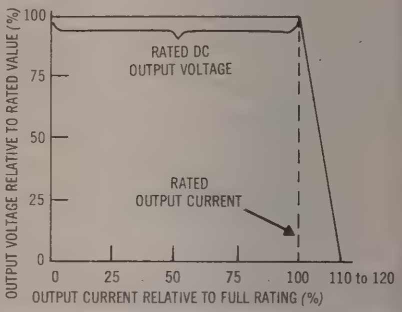

Fig. 3. Current limiting restrictions output current to a valve somewhat greater than full rated output; it resets when fault is removed.

Sensing: Regulation techniques that monitor output voltage and/or current. *Local sensing* refers to the output terminals. *Remote sensing* allows a feedback from the load circuit to the power supply.

Soft start: Allows the supply to start from zero current and/or voltage over a stated period of time during start up to prevent voltage overshoots and current imbalances.

Switchers: Power supplies using switching techniques to achieve high efficiency regulation. These techniques can have attendant EMI/RFI problems.

Tracking: The maintaining of fixed ratios between multiple outlets despite variations in line, load or temperature. Particularly important in supplies with symetrical (+)(–) outputs.

Transient protection: Circuitry designed to protect the supply from high amplitude line transients. Generally expressed in terms of peak voltage and maximum transient time duration.

AC & DC CLAMP-ON CURRENT PROBES

Current probes extend the current measuring capabilities of digital multimeters, power instruments, recorders or loggers; some models are designed specifically for use with oscilloscopes. The probes clamp around the current-carrying conductor to measure current without interrupting the circuit under test. The output of the probe is current or voltage, providing current measuring capabilities to instruments with low current or voltage inputs. AEMC has the widest selection of current probes available.

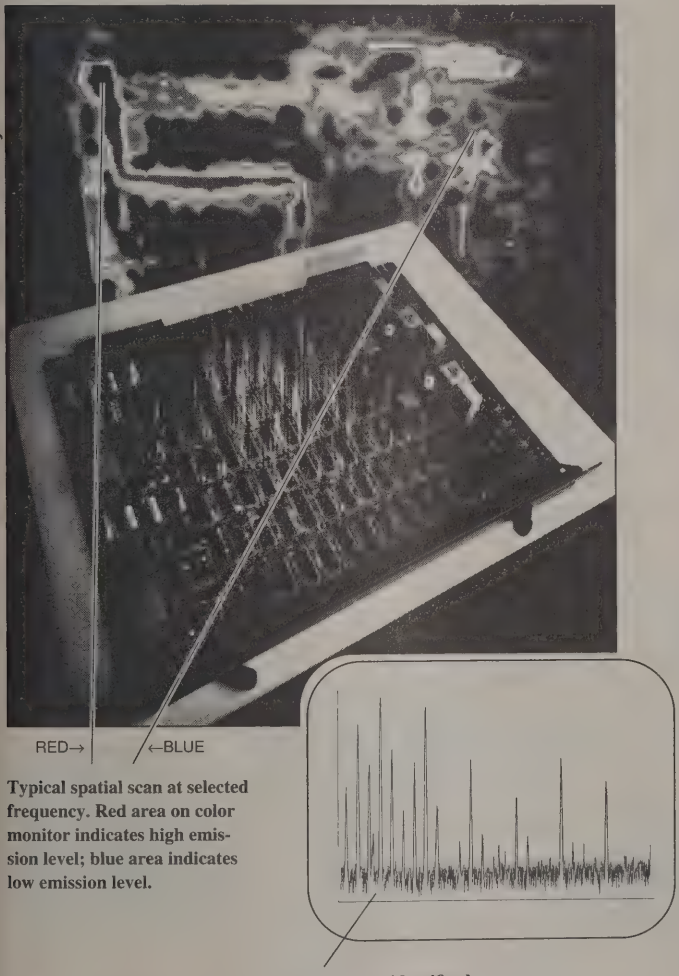
EMSCAN emissions scanner

- **Spectral scan identifies emission frequencies.**
- **Spatial scan locates and color-maps high-, medium-, and low-level emission sites at any selected frequency.**
- **Test results storable for later comparison after corrective design modifications have been made.**
- **Frequency range 10-750 MHz.**
- **Removable scanner plate can be placed between closely-spaced PCBs.**

The EMSCAN emissions scanner locates and quantifies magnetic-field activity on and near printed-circuit boards and other equipment that can be placed on its 9" x 12" scanner plate. The thin plate is also removable to be used in a rack of closely-spaced boards. Use of EMSCAN can reveal unacceptable emissions levels at an early stage of product development, thus greatly reducing the cost of redesign before compliance testing.

A scanning array of 1280 current probes under the surface of the EMSCAN board collects magnetic-field-level information which is processed by the user's spectrum analyzer or receiver and any of a wide range of 386- or faster PCs or workstations. The EMSCAN software, written under "Windows" 3.1, makes emissions analysis easy and reliable, even for a non-engineering-level operator.

The basic EMSCAN package consists of the scanner board with integral power supply and IEEE-488C interface, and the software for conducting all the scanning, storage, retrieval, and comparison tests. A receiver or spectrum analyzer and a computer with color monitor are required.



Typical spatial scan at selected frequency. Red area on color monitor indicates high emission level; blue area indicates low emission level.

Spectral scan identifies key frequencies for further study.

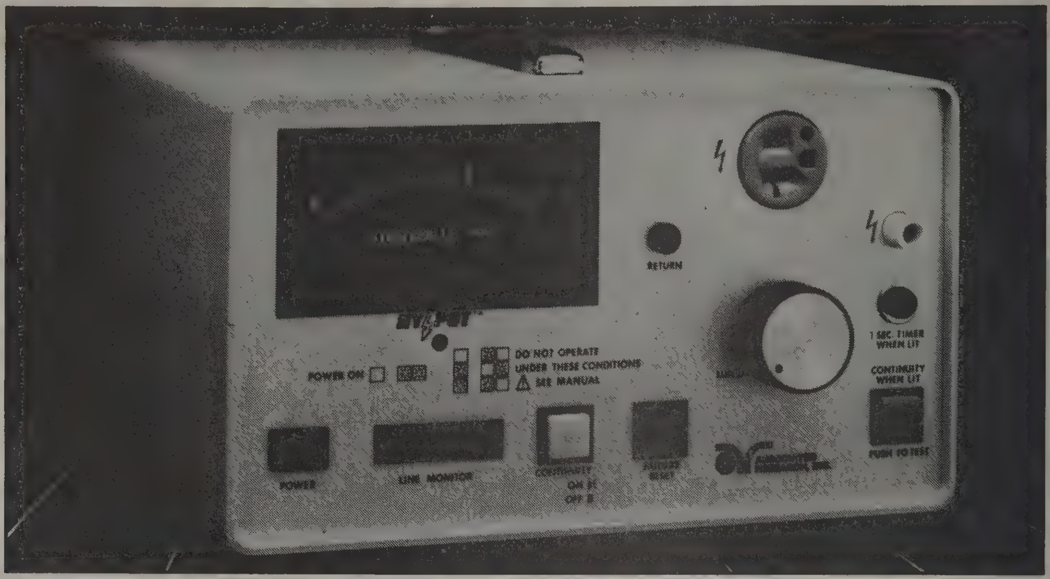
Associated Research's Broad Line of Hypot® Test Equipment



Assures that we have the dielectric withstand tester you need to meet your specific application.

A hipot (high potential) test checks for current leakage or electrical breakdown that can cause electric shock. Underwriter's Laboratory requires specific hipot test procedures for different product groups. Associated Research's full line of Hypot® testers meet UL and other agency requirements.

All Hypots from Associated Research feature:

- Operator Safety. Every Hypot has several built-in safety features, such as safety line monitor and test cables rated at 30KV, to protect your employees from electrical shock during hipot testing. Also available is our optional Safe-T-Probe,™ Model No. SP02.
- Easy to set-up and operate. Heavy-duty color coded switches for readability and durability.
- Clear indication of product failure. Your personnel will know when a product has failed to pass the required hipot test.
- Easy to read meters accurately monitor high voltage output during hipot testing.

Depending upon the product you manufacture, you may require one or more of the following features in your hipot tester. Check the table below to select the Hypot model that meets your needs.

- Visual Failure Indicator: Warning light that comes on whenever a product fails the hipot test.
- Audible Failure Indicator: Loud, distinctive alarm that automatically sounds when a product fails the hipot test.
- Manual Reset: When the visual and audible warnings are triggered, the Hypot must be manually reset to continue product testing.
- Built-in Current Meter: Measures the current leakage during testing.
- One Second Timer: Built-in timer circuit automatically maintains high voltage output for one second for consistent testing. One second output is required for some UL test procedures.
- 120K Ohm Resistance: Provides minimum sensitivity adjustment as required for some UL test procedures.

Additional test procedures may require a Hypot accessory such as a timer to maintain output voltage for 1 to 99 seconds, a foot switch for remote operation or a resistor bank for testing regulation and setting trip point.

Auxiliary relay contacts on some Hypots can be used to trigger an automatic reject mechanism to remove defective products from the production line.

Request our catalog for complete information on our Hypot testers and accessories.

MINI PRODUCT GUIDE

AT&T
Capital Corporation

OUR COMMITMENT... ONLY THE BEST

Quality — Instrument Services is dedicated to offering our customers only the best. We make it easy for you to rent, rent with option to buy, lease or buy the finest electronic test and computer equipment available.

■ Quality Is Top Priority

As an industry leader and innovator for almost two decades, Instrument Services has the financial strength and expertise to provide you with the high level of quality service and support you have the right to expect.

Our inventory is unmatched in depth and selection of products. Our in-house calibration facility meets the most stringent specifications required by commercial and government users.

Instrument Services offers a wide variety of flexible financing options, whether you plan to rent, rent with option to buy, lease or buy. Additionally, we place an uncompromising emphasis on total customer service and satisfaction.

■ A Reputation For Leadership

Instrument Services was originally established to serve the rapidly growing demand for short-term rentals of electronic test and design equipment. Soon thereafter, we expanded our product line to include computer equipment and our services to include options for equipment leasing and purchasing.

In 1990, Instrument Services was purchased by AT&T Capital Corporation, an organization which is revolutionizing the equipment financing industry.

■ Centralized Distribution Means Faster Service

Our 100,000 square foot International Distribution Center (IDC) and calibration facility is located on the grounds of the Dallas/Fort Worth International Airport in Texas. It is perhaps the most efficient operation of its kind in the industry.

The IDC houses a testing and metrology lab staffed by more than 50 technicians, plus our 24-hour Customer Service Hotline operations. Instrument Services' shipping section operates 16 hours a day to speed your equipment to you immediately. Our on-airport location puts us hours (sometimes even days) ahead of our competitors.

■ We Know What You Want

When you call an instrument rental company, you expect an inventory of the latest electronic equipment, ready to ship.

Instrument Services continually refreshes our inventory with the latest models from the major manufacturers... we purchase more than $5 million every month to support growing demand. With a $150+ million inventory of more than 5,000 models, rest assured we'll have what you need when you call.

■ We Get It First So You Can Too

Instrument Services' strong relationships with manufacturers, along with our large-quantity orders, means we're often among the first to receive the hot new models you want. With such an extensive warehouse, we can maintain inventory depth in those popular, old reliable products, too.

■ Calibration You Can Count On

At the heart of Instrument Services' IDC is our Calibration Laboratory, staffed by more than 40 professional metrologists.

1-800-874-7123

AT&T
Capital Corporation

Inside the environmentally-controlled facility, specialized metrology teams, working with $3 million in state-of- the-art lab standards, ensure that our calibrations meet or exceed both government and commercial standards.

■ Tough Audits — Top Quality

Instrument Services' Quality Assurance Manager, a Certified Quality Engineer (ASQC/CQE), oversees the auditing processes that verify that our Calibration Laboratory is in complete compliance with federal, defense and commercial standards:

- MIL-STD-45662A
- MIL-I-45208A
- 10 CFR Part 21
- 10 CFR Part 50 Appendix B
- ANSI/ASQC M1-1987
- ANSI/ASQC Q90-1987 through Q94-1987

Instrument Services' calibration intervals are computed to meet a 90% reliability target, and calibrations performed in our laboratory are directly traceable to the National Institute of Standards Technology (formerly the National Bureau of Standards).

■ One Call Does It All

Our on-line, computerized inventory tracking system gives us instant reports on the availability of all equipment in stock. When you call, an Applications Engineer gives you a prompt assessment of any instrument at that moment. You get answers fast — no long waits, no multiple phone calls. We verify availability of the equipment, you place your order, and it's on its way to you the very same day.

■ Ready To Go Right Out Of The Box

When your order arrives from Instrument Services, unpack it, plug it in, and it's ready to go. Since we've taken extra care to test and calibrate it properly, you can be assured that it is ready for immediate use.

Most instruments are shipped in reusable, customized transit cases or heavy duty, dual-wall cartons for extra safety.

Thanks to the care we take every step of the way, Instrument Services boasts an astounding 99% acceptance record for our equipment — unique and notable in our industry.

■ Rent, Rent With Option To Buy, Lease, Buy... And Sell

What you may not be expecting from a rental company are the extra programs that Instrument Services provides. We not only rent fully-calibrated and tested instruments at attractive low rates, we lease and sell equipment from our inventory too, and we can provide financing for equipment purchased from Instrument Services.

We continually sell our older inventory to make way for new products. Instrument Services accesses our world-wide customer network to regularly buy and sell used equipment. To meet this increasing resale demand, we will purchase your unused or under-utilized test equipment, allowing you to better control your test and measurement inventory.

■ For Information And To Place Your Order, Call: 1-800-874-7123

You'll be connected with an Applications Engineer who can answer questions, offer suggestions, verify equipment availability and shipping schedules, and take your order.

■ For Problem Resolution, Call The Service Hotline: 1-800-621-6354

Instrument Services' Customer Service Hotline is staffed 24 hours a day, 7 days a week. Customer Service Representatives can arrange for repair or replacement as required.

FINANCIAL OPTIONS: RENT, RENT WITH OPTION TO BUY, LEASE OR BUY

Every customer and every company has different needs and different requirements. At Instrument Services, you can choose the equipment financing option that's best for you.

■ The Benefits Of Renting From Instrument Services

Renting is quick and easy. You call Instrument Services, and we ship equipment to you the same day. Then, you make a single payment each month. When you no longer need the equipment, just return it to us.

Renting gives you control. You are never locked in. You can return rental equipment at any time, with no notice and no further obligation. Moreover, rental equipment is fully covered for service and repairs — if you have problems, we repair or replace the equipment promptly.

Renting lets you try before you buy. It's the perfect way to evaluate equipment before committing to a purchase or long-term lease.

Renting gets you the equipment you need when you need it. In emergencies, or when you're waiting for delivery of new equipment, renting what you need keeps you operating efficiently.

Renting lets you avoid obsolescence. If a newer model comes on the market, send in your old equipment and upgrade to a new rental unit.

Renting preserves your capital. You don't tie up your capital or credit lines when you rent, so you retain your full borrowing power.

■ The Benefits Of Leasing Or Renting With Option To Buy From Instrument Services

Renting With Option To Buy (Renting w/OTB) is flexible. Instrument Services can tailor your program to suit your needs. We offer low-rate leases with straight financing, as well as highly flexible Alternative Purchase Plans (APPs) and SWAP leases that allow an array of purchase and upgrade options. We can construct a financing plan just for you.

Renting w/OTB preserves your capital. You acquire the equipment you need, but you preserve your credit lines for other expenditures.

Renting w/OTB offers tax benefits. Lease payments are normally treated as operating expense, and costs are assigned to specific projects.

Renting w/OTB lets you enjoy full customer support from Instrument Services. We're just a toll-free phone call away when you need us.

Renting w/OTB lets you build up equity. If you think you might eventually buy the equipment, an APP lease is a wise alternative to renting — you build ownership as you use the equipment.

Renting w/OTB avoids hidden costs. This option includes maintenance, downtime rental costs, and obsolescence protection. There are no nasty surprises.

The Benefits Of Buying From Instrument Services

If you decide that you want to purchase your equipment, call us first. Instrument Services sells a wide variety of previously-owned electronic equipment made by the world's foremost manufacturers. We carry thousands of up-to-date models in our inventory, attractively discounted and immediately available.

Not only do you pay a lot less when you buy equipment from Instrument Services, but chances are we'll have just what you need, and we can get it to you fast — generally, shipment is same day. Plus, we offer you financing options, warranties and the full-service support of Instrument Services' technical team on every piece of equipment you buy.

When you buy previously-owned equipment from Instrument Services, you're way ahead of the game:

- Costs can be substantially less than the cost of new equipment — often as much as 50-75% less.
- We sell only high quality equipment that's been maintained or checked to original factory standards.
- We fully configure the equipment to your specifications.
- We refurbish, recondition and thoroughly test every unit.
- We warranty equipment for up to 90 days. Extended warranty plans are also available.
- We offer flexible financing.

TAX LAWS FAVOR RENTING AND LEASING

Several changes in the tax laws in recent years clearly penalize purchasers of capital equipment, making renting and leasing more attractive than ever. Consider these significant tax consequences when your company anticipates acquiring new assets:

The Alternative Minimum Tax (AMT)

The AMT ensures that all profitable companies pay income tax. The law requires that a company compute its taxes twice — once using the normal method and a 34% tax rate, and again using a 20% rate but adding certain tax preference items to the income. Tax preference items include accelerated depreciation taken on capital assets.

Renting or leasing equipment, rather than buying it, avoids the AMT, as rental and lease payment deductions are treated the same under AMT calculations as under normal tax computations.

Mid-Quarter Convention (MQC)

If you purchase more than 40% of your assets for the year in the last fiscal quarter, the MQC requires that you depreciate all assets from the middle of the quarter in which they were purchased. This normally causes a lower first-year depreciation write-off. To avoid the write-off loss and the administrative tracking difficulties that can result, many companies opt to rent or lease such assets until the following year.

Foreign Tax Credits

For multinational companies, renting or leasing may result in greater utilization of foreign tax credits. The foreign tax credit limitation calculation requires that a certain portion of the taxpayer's interest expense be assigned to foreign source income. This reduces the otherwise available foreign tax credits. Rental expense, however, is not considered foreign source unless the asset is located outside the United States.

ASSET MANAGEMENT

Instrument Services has been developing inventory management and analysis programs for the better part of two decades. We perfected a system of asset management long before corporations came to realize its importance. The utilization of existing inventory often has a strong impact on a company's profitability.

Today, progressive firms are out-sourcing more and more functions in order to concentrate on their core competency. This allows them to focus their resources on their basic product or service.

Instrument Services' asset management programs will enable you to reap the benefits of our technology, skills and experience.

FLUXMETERS, MAGNETIZERS, HYSTERESISGRAPHS & MORE!

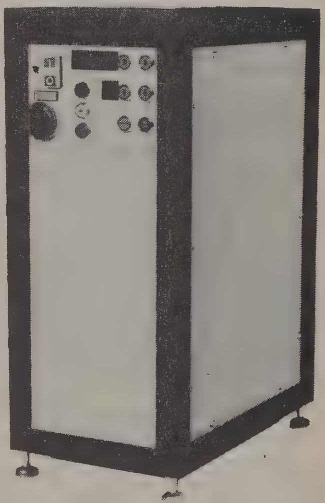
F.W.BELL Inc. is proud to represent **MAGNET-PHYSIK Dr. Steingroever GmbH** (MPS) in the United States and Canada. The MPS products exceed the performance and function of any equivalent product you have ever evaluated. With this cooperation, we offer you the best expertise in magnetic instrumentation and processing equipment in the world.

THE ELECTRONIC FLUXMETER

The Fluxmeters feature an electronic integrator with high sensitivity, extremely low drift and high input resistance. The use of digital technology affords the best drift compensation available. An optional IEEE-488 port lets the Fluxmeter be fully controlled by a computer. An extensive range of point, potential and moment measuring coils are available. Special measuring coils can also be designed for your application.

MAGNETIZERS

The MPS Impulse Magnetizer line offers a broad range of performance, functions and features. These magnetizers are equipped with Metal Paper capacitors, thyristor high-current switches and rapid charging circuitry resistant to short circuits. They can process permanent magnets and magnet systems of AlNiCo, Ferrite and Rare Earth Alloys. Some models offer demagnetizing capabilities, and full computer control, via the IEEE-488 port. A broad line of standard magnetizing fixtures are available, as well as specials made to meet your specific needs.



HYSTERESISGRAPHS

The MPS Hysteresisgraphs are computer controlled measuring stations for the measurement of magnetic characteristic quantities of both hard and soft magnetic materials. Electronic Fluxmeters and the control unit for the electromagnet are directed by personal computer using user-friendly menus, via the IEEE-488 interfaces. Measured results and curves are outputted on the monitor, plotter, printer and/or the results file which allows further processing by other software, like spreadsheet programs.

NOMOGRAPH VOLTAGE DROP

NOMOGRAPH OF VOLTAGE DROP ACROSS LOAD SUPPLY LEADS
(as a function of wire size and load current)

THIS NOMOGRAPH CAN BE USED TO FIND:

Maximum current carrying capacity recommended for any standard wire size.*

1) With a straight edge, connect from the wire size on Scale 2 to the point "A" on Scale 3.
2) Read I_{max} on Scale 1.

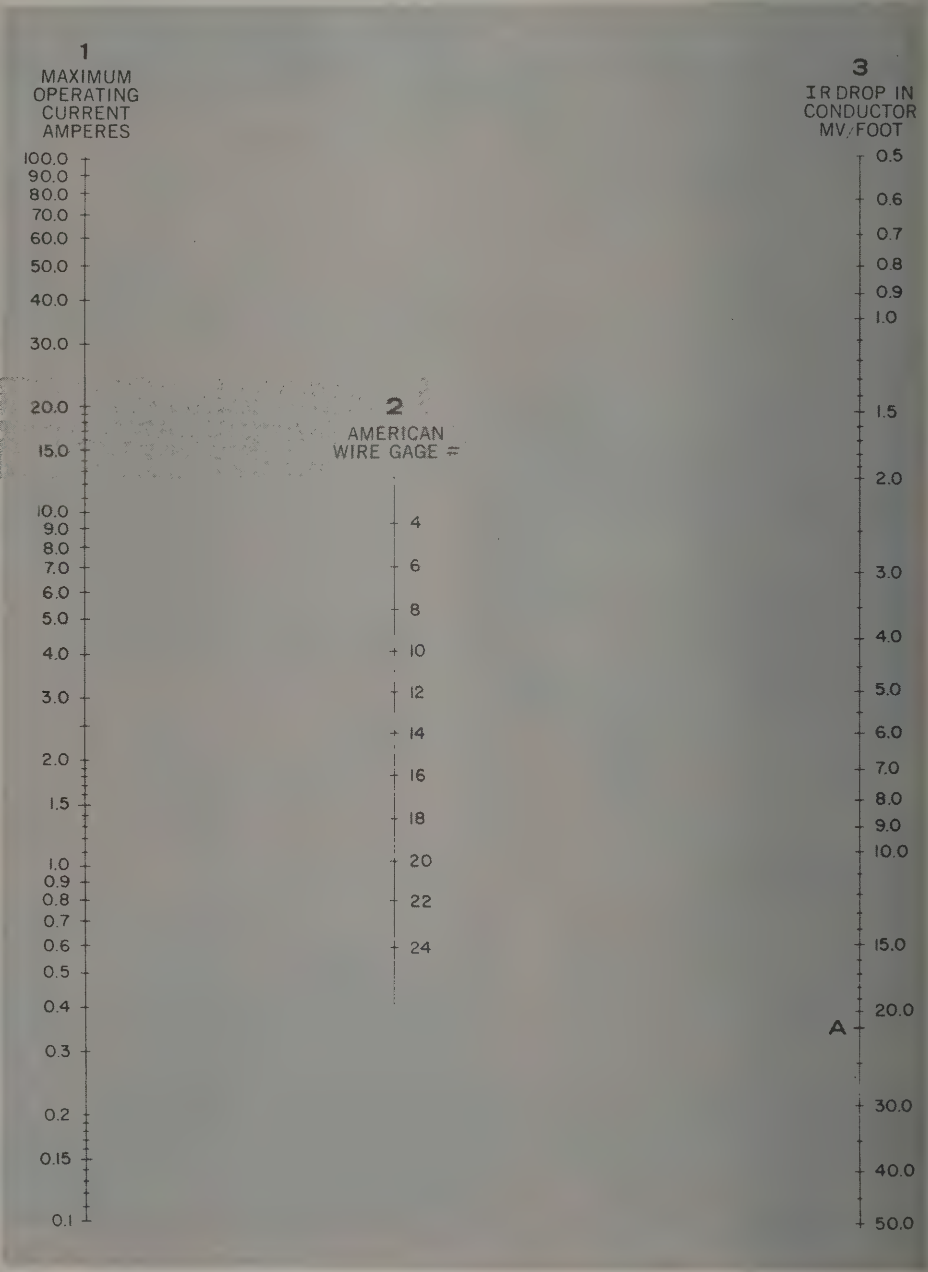
Voltage drop in millivolts per foot for known wire size and operating current.

1) With a straight edge, connect the known current on Scale 1 and the wire size on Scale 2.
2) Read voltage drop on Scale 3.

Wire size required for known operating current and known maximum tolerable voltage drop across supply leads.

1) Determine maximum tolerable drop in millivolts **per foot** of lead (sum of positive and negative leads).
2) Connect the value on Scale 3 (as determined in step 1) to the known current on Scale 1.
3) Read wire size on Scale 2.

* *Based on an arbitrary minimum 500 circular mils per ampere. High-temperature class insulation will safely allow higher currents.*



NOTE: A voltage stabilized Power Supply controls the voltage across its output terminals. Hence, the wire conductors used to connect the load must be considered as part of the load. At high load currents, the voltage drop across the supply leads may appreciably degrade stablization at the load. Kepco models equipped with the *remote error sensing* feature can automatically compensate for voltage drops of up to 500 mV across each load supply lead.

Universal Pulse and Delay Generator System

BNC's Model 6040 Pulse System consists of a 100 MHz mainframe pulse source and a series of plug-in modules that produces a variety of both electrical and optical pulses at rates to 700 MHz.

The 6040 mainframe alone serves as a general purpose 5 V and ECL pulse source and trigger-synchronized digital delay generator with up to 1 ns–step resolution. The family of plug-in modules adapts the instrument to an unprecedented choice of additional uses. They include 150 ps transition time logic level operation at rates to 500 MHz and other functions where amplitudes to ±20 V or ±950 V with fast rise times and rep rates are needed. By installing optical output modules, the 6040 can be quickly transformed into a light pulse generator of various wavelengths that can also be externally modulated or provide CW outputs.

Through use of a crystal-controlled time base, the 6040 System offers frequency accuracy of .01% and delay syncing performance with jitter as low as 25 ps. Both IEEE-488 GPIB and RS-232 programmability are provided along with internal memory storage of parameter settings. The Model 6040 System sets a new standard of pulse generating capabilities and instrument value. Principal specifications for the 6040 mainframe and plug-in modules follow.

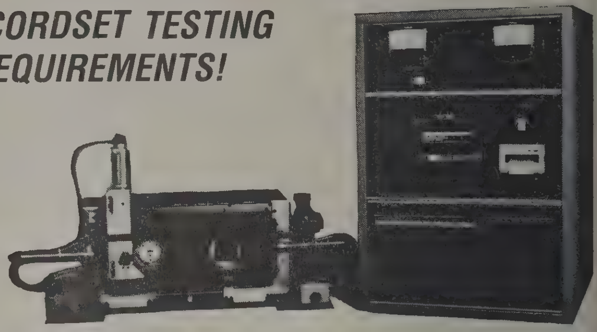
THE CCM II MEETS IBM'S CORDSET TESTING REQUIREMENTS!



THE CCM II AUTOMATICALLY TESTS:

- ***CONTINUITY*** • ***SHORT CIRCUIT*** • ***POLARITY***
- ***HI-POT:*** (0 to 3.5 KVAC Programmable dwell time from 0 to 9.9 seconds. Features switch selectable automatic capacitance neutralization so that only resistive leakage will be measured.)
- ***SKIN TEST:*** (Tests conductor to plug surface HI-POT as above.)
- ***CONDUCTOR RESISTANCE:*** (25 Amps at 12 VAC with variable trip level from .02 to .5 ohm sensitivity. Resistance test can be performed on ground conductor only or all 3 conductors.)

SPECIAL FEATURES OF THE CCM II

- **Cut-off Knife:** Automatically chops male plug off the rejected cord.
- **Acceptance Brander:** Automatically brands face of male plug on "good" cords.
- **Data Counters:** Counter information is stored in computer memory. There are operator viewable/erasable counters and permanent internal counters.
- **Printer:** Panel mount printer for "hard copy" of vital job statistics.
- **Cord Diagnostics:** If there is a fault in the cordset, the unit will determine whether it is located in the male end, female end or in the cable.
- **Machine Diagnostics:** Full diagnostics check all vital test functions upon "Power-up" and during each test cycle.
- **Zero Insertion Force Receptacles:** Prevent operator fatigue and assure proper electrical contact during testing.
- **Receptacle Configuration:** Male side is for a standard NEMA 5-15P plug. Female side has receptacles for CEE-22 business machine plug and also for power supply cords with stripped ends or non-insulated terminals. Additional receptacle configurations quoted on request.
- **Cycle Times:** The complete test cycle, excluding insertion and withdrawal of the test cord, requires 3 to 4.5 seconds, depending upon the number of tests and dwell times chosen.

MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The opposition (in ohms) of capacitance to the flow of alternating current, equal to the reciprocal of the product of the angular frequency (2π times frequency in Hertz) of the current times the capacitance in farads.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The ratio of the capacitance of a capacitor with some material other than air between the capacitor plates to the capacitance of the same capacitor with air between the plates. For example, the dielectric constants of air, Teflon®, polystyrene and ruby mica are 1, 2.1, 2.6 and 5.4, respectively.

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (µF) 1 microfarad (µF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

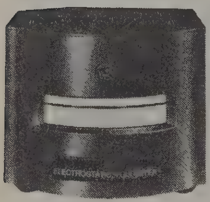
HIGH VOLTAGE DIVIDER

Model PARK Voltage Divider is constructed to a design by J. H. Park (Ref: Journal of Research" of National Bureau of Standards, Engineering and Instrumentation Vol. 66C, No. 1, Jan. - Mar., 1962. Reprints available upon request.) It is similar to the NBS standard employed in their calibration of high voltage instruments. Each 100 kv divider consists of 100 individually shielded one-megohm resistors, matched to each other to achieve an approximate temperature coefficient of less than 1 ppm/°C, and connected in series to form a vertical helix between a ground plate and a high voltage electrode. Uniquely shielded, testing indicates that corona, heating and leakage errors are less than 10 ppm at less than 10 ppm at 50 kv and 50 ppm at 100 kv.

The divider's special "hat" is designed to give uniform gradients from the high voltage electrode to ground and allows stacking of additional 100 kv units for higher voltage measurements. Each unit is only 22 1/4" high! DC Ratio Accuracy: .05%, 100 kv to 1 v: .5%, 100 kv to 1 kv. AC Ratio Accuracy: ±.5%, 50 kv (max.) to 500 v. (60 cps only). Recommended readout instrument at 1 v output tap is a precision DC potentiometer, at 1 kv tap (.5 kv on AC) recommended instrument is a .5% accurate electrostatic voltmeter (Sensitive Research Model ESD described below).



ELECTROSTATIC VOLTMETER (high voltage)

Model ESH AC/DC. electrostatic voltmeter is available as a single range instrument up to 100 kv fs (140 kv DC only), or with as many as 4 switch-controlled ranges from 5 to 50 kv fs. DC input resistances to 5 x 10^{15} ohms. Capacitance varies from approx. 30 mmfd on 5 kv range to 10 mmfd on 50-100 kv ranges. Reads true RMS. Accuracy is ±1% fs (±.5% up to 50 kv) 6" scale length. Transit lock and brackets for panel mounting available.

ELECTROSTATIC VOLTMETER (portable)

Model ESD portable AC/DC electrostatic voltmeter is available as a singer or multirange instrument to measure from 120 to 6 kv fs. Insulation resistance is 1 x 10^{15} ohms. Capacitance varies from approx. 225 mmfd for a 120 v range to 20 mmfd for a 6 kv range. Multirange instruments are designed for AC/DC measurements on first range. AC only on higher ranges. ±.5% to 1% fs accuracy (±1.5% for ranges of 150 v and less). 5.2" scale length. Size: 7 3/4" x 7 1/2" x 6 1/16". Available as edgewise panel instrument with the same performance characteristics except insulation resistance approx. 1 x10^{13} ohms.

ELECTROSTATIC VOLTMETER (small portable)

University Model is a smaller, more economical version of the portable Model ESD. Single and multirange instruments available from 300 v to 5 kv fs. ±1% fs accuracy. 4" scale length. Molded bakelite case. Size 5 1/4" x 5" x 4 3/8".

SERIES 931 DC PORTABLES

0.5% Accuracy

Scale length: 4.04" (103mm) Self-shielded permanent-magnet moving-coil mechanism — a magnetic field created by a conductor carrying 7000 amperes at a distance of three feet from the instrument would cause a temporary error of less than 0.5%. Size: 5-1/4" x 5' x 3-1/4" (133 x 127 x 83mm). Approx. weight, 2 lbs. (0.9kg.).

SERIES 433 AC PORTABLES

Self-contained ranges: single, double, and triple up to 750 volts. Higher ranges obtainable with multipliers, or by using Model 311 Potential Transformer in connection with 150-volt range. Size: 5-1/4" x 5" x 3-1/4" (133 x 127 x 83mm). Approx. weight: 2-1/2 lbs. (1.1kg.).

AC AMMETERS

Power Consumption 5 amps, 60 Hz, 0.50 watt, 0.52 VA. Single, double and triple ranges cover frequencies 25-500 Hz. Higher frequency coverage available. Triple range instruments have internal current transformer. All have two binding posts, double and triple range instruments have range selector switch. For ranges above 50 amps, Model 461 Current Transformer, Type 2 with 5 amps instrument is recommended.

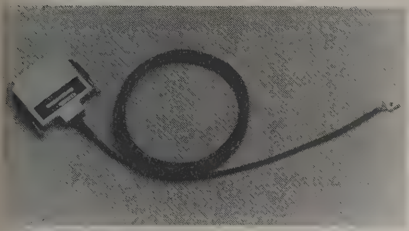
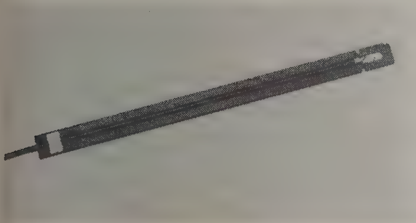
HALL EFFECT TESLAMETERS

High accuracy measurements of magnetic fields

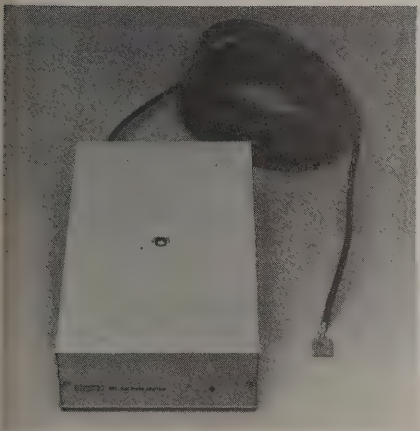
DTM-141



Probe LPT-141



Probe Holder



HPI

Group 3 Teslameters provide superior accuracy and long term measurement reliability combined with digital interfacing options not found on any other commercial instruments. All Group 3 Probes are precalibrated against an NMR (nuclear magnetic resonance) measured field. An EPROM in the probe cable connector stores the unique field and temperature characteristics of each probe.

DTM-132 and DTM-141 Single Axis Teslameters

Two field measurement resolution alternatives are offered in the same compact package with high visibility LED display. The DTM-132 has 12-bit resolution with a 4 1/2 digit display and the DTM-141 has 16-bit resolution with a 5 1/2 digit display. Field units may be tesla or gauss. Digital interfacing options are RS-232-C and serial fiber optic or IEEE-488. Since all probes are individually calibrated they may be interchanged without calibration.

HPI Hall Probe Interface

The HPI may be used to provide high-stability, high resolution interfacing of Hall probes to analog data acquistion systems. It provides a very stable 100mA, 19.2kHz control current and includes phase sensitive detection for the Hall voltage. Four gain settings may be selected. An analog output corresponding to temperature is also provided when used with Group 3 probes including temperature sensors. Calibration tables are offered as an option.

METROLAB

NMR TESLAMETER AND DIGITAL VOLTAGE INTEGRATOR

Very high accuracy and stability measurements of magnetic fields

When absolute accuracy and high resolution magnetic field measurements are critical NMR (Nuclear Magnetic Resonance) Teslameters become the instrument of choice. Important applications are the calibration of magnetic sensors, mapping very uniform magnetic fields such as MRI (magnetic resonance imaging) magnets and to provide the the field input for closed-loop stabilization of magnet systems.

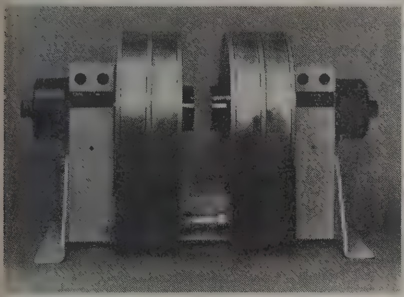
LABORATORY ELECTROMAGNETS

Variable-field electromagnet systems for magnetic property studies



5403

These variable-field electromagnets are suitable for Hall-effect studies, magneto-optics, ferromagnetic resonance, B-H curves, magnetic sensor calibration, magnetic separation and ESR/NMR spectroscopy. The smaller magnets (3470,5403,5403AC) have "C-frame" yokes for ease of access and simplicity. A rectangular "H-frame" yoke is used for the larger magnets to obtain mechanical stability and high field uniformity. All the magnets have changeable pole caps with different pole face diameters and all except the 5414 have continuously adjustable pole gaps. This enables optimization for the geometry and field requirements of a particular application. The 5403AC magnet is laminated for fast field ramp and rapid settling.

5414

Versatility. The yoke and coils are designed for maximum access to the working region and mounts are available for either horizontal or vertical field orientation. For the H-frame magnets, 45° Mounting Angles are available to incline the magnet yoke back at 45° from the vertical. This allows equipment to be inserted into the magnet gap from the horizontal or vertical directions. Provision is included for axial viewing or access holes in one or both Pole Caps.

Reliability. GMW magnet coils are the most reliable commercially available. They are wound from precision slit, high conductivity copper strip with mylar interturn insulation & a glass fiber outer wrap. Cooling is achieved by separately cooled heat sinks integrated with the coil. The complete coil assembly is vacuum impregnated with epoxy resin to produce a void-free structure which will not degrade with full power continuous or cycled operation. Protective overtemperature interlocks are mounted on all heat sinks and the H-frame magnets also have coolant flow interlocks.

Systems. Complete Electromagnet Systems can be configured to meet the specific application. Power Supplies can be unipolar, true bipolar or unipolar with reversing switch and stabilities from 500ppm to better than 1ppm. Digital Hall or NMR Teslameters provide field measurement capability and computer control is implemented using RS-232-C or IEEE-488 interfaces.

GMW also offers special electromagnet systems for ion beams, magnetic tape alignment, & semiconductor processing.

† Accuracy = ±(Specified basic accuracy +.08 x Residual Impedance) after subtraction of Residual Impedance.

* Residual impedance is reduced to .04Ω or 5 pF for lowest decade with LR Option. This makes for more effective usage of low impedances. Lowest decade is isolated from the others with a switch when desired.

** Higher power resistance substituters (1 watt or higher) available; see below.

MINIGLOSSARY
OPTO SEMICONDUCTORS

Avalanche Photodiode: A photodiode that takes advantage of avalanche multiplication of photocurrent. It is particularly suited to low noise and/or high speed applications.

Contrast: A noticeable difference in color, brightness, or other characteristics in a side-by-side comparison.

Chrominance Contrast: The color contrast between two adjacent surfaces of identical area, shape, texture, and luminance. The human eye is more sensitive to differences in color than it is to differences in brightness.

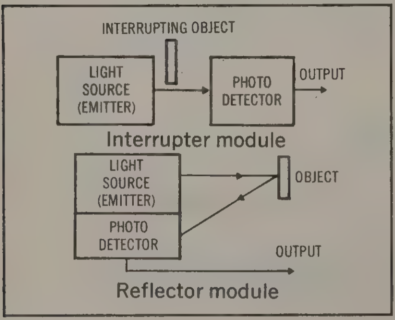
Current Transfer Ratio: The ratio of an optocoupler's output current to input current at a specified bias.

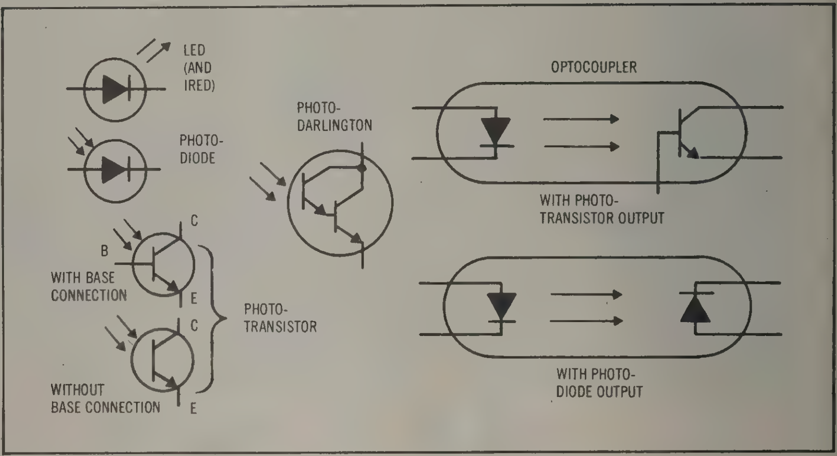
Dark Current: The leakage current of a photodetector with no incident light.

Dominant Wavelength: The wavelength that is a quantitative measure of apparent color of light as perceived by the human eye.

Infrared Radiation: The electromagnetic wavelength region between approximately 0.75 and 100 micrometers longer than the wavelength of visible light.

Interrupter (module): A device that produces an electrical output signal when an object breaks the light (visible or invisible) between a light source and a photodetector.





IRED: An infrared-emitting diode. See light-emitting diode.

Light Current: The current that flows through a photodetector when it is exposed to radiant energy.

Light-Emitting Diode (LED): A semiconductor diode that emits incoherent light at its PN junction when forward biased. The light can be in the visible or invisible (infrared) wavelength region.

Luminance Contrast: The observed brightness of a light-emitting element compared to the brightness of the "surround," an integral part of the device and inseparable from it.

Optocoupler: A device that transmits electrical signals, without electrical connection, between a light source (input) and the receiver (output). The input is generally an LED; the output might be a photodiode, phototransistor, a photo–Darlington, etc. Sometimes referred to as optoisolator.

Peak Wavelength: The wavelength at the peak of the radiated spectrum of an emitter.

Photo–Darlington: A light-sensitive Darlington-connected transistor pair. The photo–Darlington has a very high sensitivity to illumination or radiation.

Photodetector: A device that provides an electrical output signal when subjected to radiation in the visible, infrared, or ultraviolet regions of the electromagnetic spectrum. Photodiodes, phototransistors, and photo–Darlingtons are the most common type of photodetectors.

Photodiode: A junction diode that is responsive to radiant energy. Photodiodes have a high degree of linearity between the input radiation and the output current, and faster switching speeds than phototransistors.

Photothyristor: A thyristor whose switching action is controlled by light applied to the thyristor gate.

Phototransistor: A light-sensitive transister that delivers an electrical output proportional to the light intensity at its input. The low-level photocurrent that is generated is amplified by the current gain of the transistor. The base region (or gate in a FET) may or may not be brought out as an external terminal.

Point Source: A source with a maximum dimension less than one-tenth the distance between sources and detector.

Reflector (module): A device containing a light source and a photodetector that detects any object that reflects light produced by the source back to the detector.

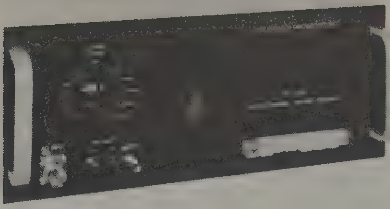
TRS-104 HIGH PRECISION AC/DC PROGRAMMABLE THERMAL TRANSFER STANDARD



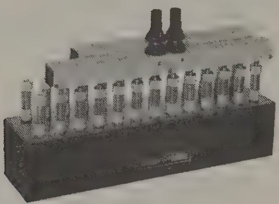
JULIE RESEARCH has been a leading manufacturer and innovator in the field of high accuracy calibration equipment for 40 years, introducing computerized 1 part per million products such as the DM-1000 Digital Multimeter and LOCOST-106 AC/DC Precision Automated Calibration System at a time when automated testing was virtually unheard of. The new TRS-104 Programmable AC/DC Thermal Transfer Standard combines the accuracy and stability of the JRL primary standard DM-1000 Digital Multimeter, TNB-102 Thermocouple/Multiplier Set and BA-108 Precision Nanovolt Amplifier in a single instrument at a fraction of the size and cost of these standards.

The TRS-104 is a high accuracy AC/DC thermal transfer standard which is programmable over the IEEE-488 bus. It is especially designed to have the lowest possible frequency errors from DC up to 1 Megahertz and can provide extremely accurate AC calibration from below 0.25 Volts to 1100 Volts. The front panel display provides direct digital readout of AC calibration with 1 PPM resolution.

The TRS-104 has 12 voltage ranges with accuracy better than 0.01% in the low to mid-frequency ranges. DC reversal error is better than 0.005%. Because its circuitry consists of thermocouples and multiplier resistor sets identical in stability and frequency response to the TNB-102 Primary Transfer Standard, the TRS-104 is uniquely capable of self-calibration. This feature makes it an extremely convenient and reliable laboratory standard; recertification and the resultant downtime are less frequently necessary than with other AC transfer standards.

The TRS-104 is ideally suited for calibration of other transfer standards, and precision AC voltage sources. It can function as a high-productivity "smart" AC calibrator with 6 1/2 digit display and 0.0001% resolution. The calibrator can automatically compute and display calibration data in linear units of either % of reference or % deviation from reference, eliminating the need for error-prone thermocouple data conversion by the operator. Its IEEE-488 programmability also allows computer-controlled operation using standard IEEE programming aids or standard programming languages such as BASIC and HPL. For further details, contact Julie Research Laboratories.

DTR-100A RESISTANCE TRANSFER STANDARDS



Each individual Model of the DTR-100A Series contains eleven ultra-precise, ultra-stable JRL resistors, ten of which are permanently connected in series. An optional set of shorting bars is available to connect groups of these resistors in parallel or series-parallel. Many different ratios can be obtained, including 1:1, 10:1. 1:9 and 1:10. Outstanding features of the DTR-100A include ratio accuracy as low as 0.01 PPM (0.000001%), long term stability within 5 PPM/year, temperature coefficient better than 5 PPM/°C, and quick easy conversion of resistors from series to parallel using compact, lightweight shorting bars.

The DTR-100A Series are available in sets of 10 ohm, 100 ohm, 1K ohm, 10K ohm or 100K ohm resistors. These models are primarily used as resistance standards, providing a statistical set for ratio determination, and can also be used as measurement type volt boxes, sensing resistors, or as adjustable precision resistors. For additional information, contact Julie Research Laboratories.

MINIGLOSSARY ELECTROMECHANICAL RELAYS

RELAYS

Hybrid: Isolated input and output either with a solid-state input and an electromechanical output or vice versa. Typically a reed switch is used to trigger a solid-state output or a solid-state amplifier is used to trigger an electromechanical relay.

Differential: Have multiple windings to function when voltage, current and/or power difference reaches a specific level or value.

Close-differential: The dropout value is specified close to the pickup value.

Frequency sensitive: Operates at a set frequency or within specific frequency bands. A resonant reed, for example.

Hermetically sealed: Totally sealed by glass-to-metal or metal-to-metal seals to ensure very low rates of gas leakage over long time periods.

Encapsulated: Imbedded in a suitable potting compound.

Sealed: Enclosed in a relatively airtight cover. (Not the same as hermetically sealed.)

Covered: Unsealed metal or plastic enclosure or housing.

CONTACTS

Dry circuit: contacts that carry current but do not open or close during energizing of the load circuit. Often wrongly used in reference to low level contacts.

Low Level: Contacts controlling relatively low voltages and low currents. Generally below 5 Vdc and 10mA.

OPERATING CHARACTERISTICS

Measured dropout: The value at which all contacts restore to their unoperated position as current or voltage decreases.

Specified dropout: The value at or *above* which all contacts *must* restore to their unoperated position as voltage or current is decreased.

Fig. 2. Typical time vs. current (non-inductive load)

Specified hold: The value that *must* be reached before any contact change occurs as voltage or current is decreased on an operated relay.

Specified nonpickup: The value that *must* be reached before any contact change occurs as voltage or current decreases on an unoperated relay.

Measured pickup: The value at which all contacts function as voltage or current increases on an unoperated relay.

Specified pickup. The value at or *below* which all contacts *must* function as voltage or current increases on an unoperated relay.

Sensitivity: Specified pickup expressed in watts.

Normal bridging: The make-before-break action between adjacent contacts on relays designed for this purpose.

Abnormal bridging: The undesired closing of contacts caused by a metal bridge or protrusion developed by arcing.

Magnetic freezing: Sticking of the armature to the core as a result of residual magnetism.

TIME

Actuation: The interval from coil energization or de-energization to the functioning of a specified contact.

Initial actuation: The interval from coil energization or de-energization to the *first* closing or opening of a previously open or closed contact.

Final actuation: Sum of initial actuation *and* bounce intervals following an actuation.

Contact bounce: The interval from close or opening of a contact to the end of the bounce of "chatter."

Chatter: See bounce.

Operate: Normally taken as the interval between energization and the opening or closing of the last contact to function not including bounce.

Release: Normally taken as the interval between de-energization and the opening or closing of the last contact to function excluding bounce.

Transfer: The interval between opening a closed contact and closing an open contact of a break-before-make relay.

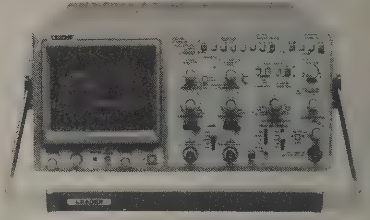
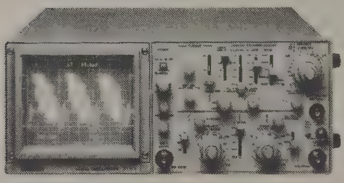
The Model 2250 combines the high accuracy of automatic calibration and precise interchannel time matching with extreme ease of use afforded by menu-driven setup choices, automatic sensitivity and time base setup, four digit on-screen frequency counter display and full cursor operations. Wide ranging trigger options include sync sourcing from one of the four channels, and P-P AUTO sync to maintain positive triggering despite wide amplitude changes.



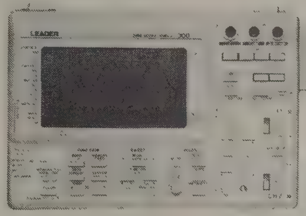
Model 3100D CRT Readout Digital Storage Oscilloscope

The Model 3100D full-featured digital/analog oscilloscope offers 100-MHz bandwidths in both DSO and analog modes. It features complete 2-channel operation, dual time base with calibrated delayed sweep, X100 expansion at pre-post trigger point, alternate sweep and triggering. It also offers separate display and reference memories.



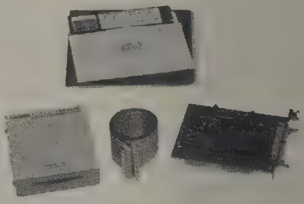
Model 8101 100-MHz Two Channel Oscilloscope

The Model 8101 features four trace operation with on-screen readout of basic settings and cursor measurements of voltage, time, frequency, voltage ratio and phase. Sensitivity ranges from 1 mV/div to 5 V/div in twelve steps with bandlimiting to 20 MHz in the 1 and 2 mV/div settings. Sweep speeds ads high as 5 ns/div are offered, and built-in CH-1, CH-2 delay lines allow observation of fast trigger edges.



Model 300 Combination DSO/DMM Data Logger/Logic Analyzer

The Model 300 is a handheld multi-function unit. The DSO features auto setup, on-screen readouts of frequency and channels 1 and 2 V p-p, separate A/D converters, 10-MHz repetitive and 3-MHz single shot bandwidths, 7-bit vertical resolution, 180 or 1.8 k user selectable word length. The time base ranges from 0.1 μs to 200 s per div.



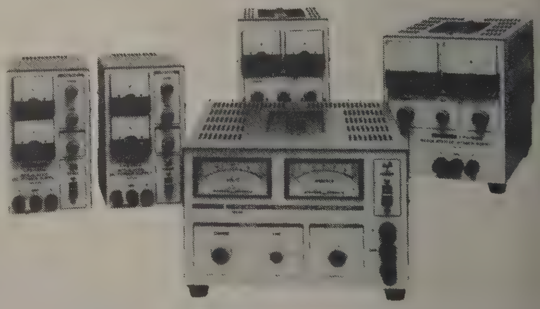
Model 300-PC Data Acquisition Kit

The Model 300-PC offers a total system solution for the uploading and downloading of waveforms and data between the memory card used with the Model 300 handheld DSO/DMM and personal computer. The software enables computer control of stored waveforms. Waveform data can be used for processing, analysis and statistics, and can be incorporated into word processing or spread sheet reports.

Model 326 100-MHz Attache Case Oscilloscope

Latest in the series of full-featured oscilloscopes small enough to fit in a 3" attache case, the Model 326 extends bandwidth to 100 MHz, and offers dual-channel PDA operation, alternate triggering with calibrated delayed sweep, and extensive triggering options.

LPS-160A Series Regulated DC Power Supplies



To meet a growing demand for bench dc power supplies, Leader offers the LPS-160A through LPS-164A. Each of the 5 models has a voltage range of 0-32 Vdc. Load currents of 0.5 to 5A are available, depending on the model selected. They feature excellent regulation and control facilities and can be stacked electronically for higher voltage output. A tracking facility permits parallel operation for greater load currents. Outputs are fully isolated so that two or more supplies may be stacked for additional output voltage. The supplies also track an externally-applied reference voltage to allow parallel connections of outputs, and permit two supplies to share total load current.

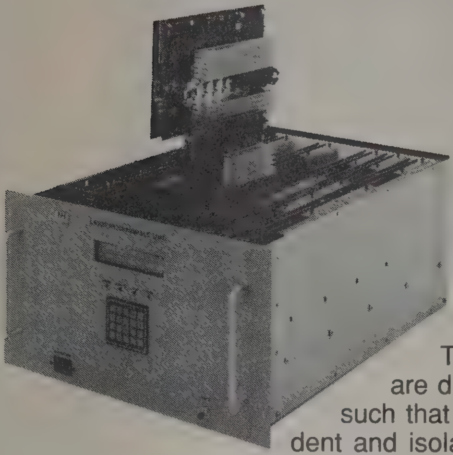
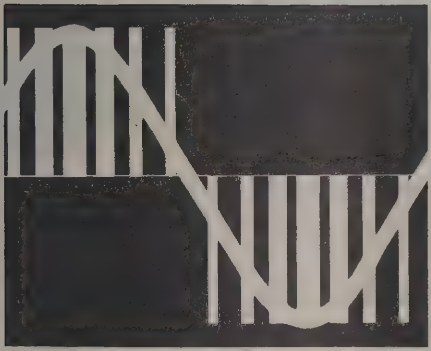
Dynamic Load Subsystem
L4000 SERIES



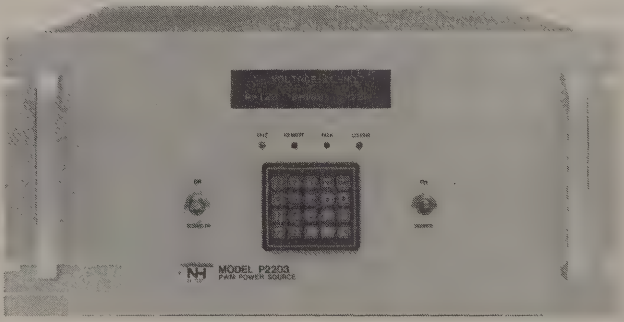
- ***Modular high density packaging saves rack space and simplifies maintenance.***
- ***Sophisticated diagnostics and software calibration specifically for use in ATE applications.***
- ***IEEE-488, MATE (CIIL) or front panel keyboard control.***
- ***Loads may be used in parallel up to 80KW, 3840 Amps.***

The L4000 SERIES Dynamic Load Subsystems are designed using instrument-on-a-card load modules such that a single controller can control up to 32 independent and isolated load modules. The product is configured to match specific load requirements by selecting from a number of standard load modules. Each load module is programmable for 1.5V to 400V, constant current, constant resistance, constant voltage, constant power or pulse modes.

Programmable AC Power Sources
P-SERIES



- ***High efficiency PWM design reduces size, weight and waste heat.***
- ***High peak in-rush current for testing switching power supplies and other non-linear loads.***
- ***Sophisticated diagnostics and software calibration designed specifically for use in ATE applications.***
- ***Modular high density packaging saves rack space and simplifies maintenance.***



The key to the 85% efficiency of our PWM Series power sources in pulse-width modulation. The diagram shows how the sine wave output of our AC sources is created electronically, by a series of pulses whose widths vary according to the amplitude they represent.

For you, that means cooler operation, smaller size and less weight than conventional AC sources. With our PWM sources, you can save on the power that's producing wasted heat as well as the cooling power required to get rid of it.

8051 Family In-Circuit Emulator

The EMUL51-PC is a high performance in-circuit emulator specifically designed to give an optimized environment to develop your 8051 family microcontroller hardware and software. The EMUL51-PC consists of a board which plugs directly into the IBM PC/XT/AT bus. The optional Trace board features an advanced trace function with sophisticated trigger capabilities.

The POD, which plugs into the target system, is connected with a 5 ft. ribbon cable to the emulator board to provide a flexible operating range.

Optionally an RS-232 box can be used. It communicates with the PC at up to 115K baud.

User friendly

The friendly user interface is one of the key features of the EMUL51-PC. Pull-down menus, mouse support and on-line help make the infrequent user feel instantly at home. The more experienced user will appreciate the fast command line interpreter and the comprehensive command set with powerful macros.

The data windows on the screen contain up-to date information on symbols and memory areas. All commands are supported with context sensitive help information. If more help is needed the whole manual is on-line, available with a key stroke.

As an alternative, a Borland key press compatible user interface is available from ChipTools.

High level debugging

Using a high-level language for code generation is a way to cut development time. EMUL51-PC gives full support for debugging directly in C or PL/M source code. This eliminates tedious symbolic debugging in assembler.

With the EMUL51-PC you can mark breakpoints directly in the source code window, and it's easy to follow the program execution on the screen listing. All C variables, both local and global, can easily be displayed or altered in one of the dedicated windows. All variables are displayed in the form they were declared in your software. This way you can work directly with floats, arrays, pointers, structures, etc.

Real time Trace

The EMUL51-PC offers trace features not found in other emulators. For instance the trace buffer can record up to 256K bus cycles with 64 bits of data. The trace can be operated "on-the-fly" which means that it can be viewed, programmed and retriggered without disturbing program execution. With the trace set-up menu you can define exactly what events are to be stored in the trace buffer. The real-time trace can be stopped (triggered) at a selected event or after a combination of multiple events. By aligning the trigger point anywhere in the trace buffer you have a full choice of pre- and post triggering.

Trace operation
At each cycle of execution 48 bits of address, data, ports and external signals are compared with eight independent "48 bit registers" to produce eight "condition signals". These eight conditions are then combined with six bits from a "64 state state-machine". The combination of these 14 signals creates a new state (or retains the old state). It also produces a TRIG and a FILTER signal that are used to control what is saved in the trace buffer. If the eight condition signals are named A, B, C, D, E, F, G and H an example of how this could be used follows:

A THEN B THEN C THEN D THEN E THEN F THEN G THEN H where A - H could be code addresses.

The trace buffer can be viewed, reprogrammed and restarted without affecting emulation.

Trigger Breakpoint
The 48 bit trace trigger qualifiers can be used to define complex breakpoints also on program execution.

Trace Display
Display trace in disassembled symbolic or binary/hex form, or as high level source code. Display can be saved to a file.

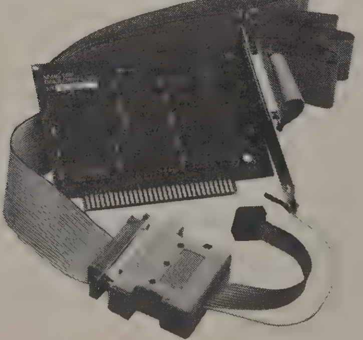
68HC16 68300 Family In-Circuit Emulator

EMUL16/300-PC is a high performance emulator for two families of microcontrollers, the 68HC16 family and the 68300 family. Develop hardware faster, debug software faster with EMUL16/300-PC. More than just a glorified serial connection, full-speed emulation, an optional Trace board, and up to 1 Megabyte of Shadow RAM on the emulator give you the control you need to get your job done quickly and easily.

User Friendly

The EMUL16/300-PC software is a *Microsoft Windows* application, is consistent with other *Windows* applications, is easy to learn, and easy to use. Windows or editing variables, RAM, registers, and for editing instructions offer a single, simple look and feel.

Through the Dynamic Data Exchange interface, other *Windows* applications can receive automatic updates about changes in the target data without slowing the target.



High level debugging

Using a high-level language for code generation is a way to cut development time. EMUL16/300-PC fully supports debugging C source from several vendors. With EMUL16/300-PC, you can mark breakpoints directly in the source code window, execute a single source statement, or step over a single C function or library call. All variables, both local and global, are displayed and edited using their declared type, including structures, unions, arrays, and floats.

Low cost alternative

While the EMUL16/300-PC is a full blown in-circuit emulator, the EMUL16/300-PC/BDM is a low cost "Background Debug Mode" emulator that uses the same windows based user interface as EMUL16/300-PC.

Real-time Trace

EMUL16/300-PC offers instruction tracing, a feature not available from simpler, serial-based emulators. The trace is up to 512K records deep and 104 bits wide, including a 40 bit time stamp. Full pipeline decoding prevents false triggers on non-executed code. Triggers can test a combination of address and data. The trace can also provide hardware breakpoints.

The trace buffer can be viewed, reprogrammed, and restarted without affecting emulation.

0 wait-state Emulation RAM.

Board support for fast termination bus cycles.

Shadow RAM
64 Kilobytes to 1 Megabyte.
Updated without slowing emulation.

RAM can be displayed in 8 bit, 16 bit, or 32 bit words as either hexadecimal words, unsigned integers, or signed integers.

DDE Interface
Automatically updates other Windows applications as target conditions change. Up to 50 simultaneous RAM addresses or variables can be exported. EMUL16/300-PC includes a DDE Interface status window that indicates the number of connections, and the status of each.

Emulation Memory
Up to 4M of 0 wait-state static RAM.

Breakpoints
Set breakpoints by clicking on a C source line, an assembly line or by typing an address in a dialog box.
Once created, breakpoint may be active or inactive without being deleted.

Single Stepping
A step can be one assembly instruction, one C source line, or one function call.

Real-time Trace (optional)
EMUL16/300-PC Trace Board features supports both 683XX and 68HC16 families. Each captured bus cycle includes the 24 bit address, a 40 bit time stamp, 16 data bits, 16 status bits, and 8 external bits.

Detailed Trace Control
User can specify the addresses that are captured (filtering). Sampling can be qualified by the type of access: data read, data write, or opcode.
A trigger event can consist of virtually any number of addresses in combination with data where each can be qualified as a data read, data write, or first opcode fetch.
Two tracing modes are provided. The normal mode allows you to specify up to three trigger events. Each event can consist of virtually any number of addresses or address ranges. The second mode, window mode, uses one trigger to turn on recording and one to turn off recording.
A centering counter allows positioning of the trigger point anywhere in the trace buffer. This allows you to trace before, after, or around the trigger.

Trace Capacity
Depending upon the configuration purchased, the trace board contains enough RAM to capture 32K records, 128K records, or 512K records.

Trace Trigger
The Trace trigger has three levels and a 16 bit counter on the last level.

Code Coverage
The code coverage feature can monitor up to 1Mb of addresses. The specified addresses do not have to be continuous. All accesses, including data and opcode prefetches, are captured.

Trace Display
"Start of Instruction" decoding makes disassembly show only executed code and keeps the display synchronized with what actually happened.

Pipe Line Support
Full pipe line decoding prevents false triggers on non-executed addresses and capturing records for discarded instructions.

Trace Input/Output
A trigger can be input through a BNC connector on the trace board. The other BNC connector carries a trigger output signal. The 25 pin "D" connector carries both of those plus 8 input signals recorded with every bus cycle.

SIMPLE and ACCURATE

QUALITEC testers are easy to use. They can be operated accurately and consistently by low skilled personnel who have no prior experience with High Voltage testing. QUALITEC testers incorporate several non-destructive tests in one test cycle, including ARC detection, LEAKAGE CURRENT monitoring, INSULATION RESISTANCE measurement, and GROUND CONTINUITY monitoring with separate audible and visual failure alarms for each type of test; and indicates exactly which type of failure occurred for quick, easy, accurate troubleshooting of the device under test.

VERSATILE

QUALITEC testers have many features which allow versatile use by design engineers, test engineers, reliability engineers, quality control inspectors, production operators and others. A QUALITEC tester is versatile enough to be operated even by your personal computer which will allow you to record, analyze and print out test results. All of QUALITEC's AUTOMATIC Hipot Testers, Insulation Resistance Testers, Meghometers, and 10, 25, 30 Amp Ground Continuity Testers have DIGITAL PANEL METERS and are available with Remote Controls. QUALITEC testers have every feature you need...just **ASK US**.

COMPLIANCE

QUALITEC testers test in compliance to virtually all regulatory agency requirements including UL, CSA, VDE,IEC,BSI, BABT, TUV, FCC, JIS and MIL-SPECS.

ROSS ENGINEERING CORPORATION'S HV wideband DC to over 10 megahertz voltage dividers can be made to match most instrument impedances and sensitivities. Most units are hermetically sealed with a low pressure non-toxic insulating gas. They can also be ordered for use in oil. Accuracies 0.01% to 0.2% DC, 0.5% to 1%, 50-400Hz, wide band DC-1MHz 3%, 5-10 MHz 3DB.

Power class dividers and probes are capable of accurate measurement and wide-band transient recording with full Basic Impulse Level withstand capability, 600V to 500KV RMS class to 1300KV PK BIL.

Also available are ***weatherproof outdoor models*** for use up to 900 KV DC or AC PK. They are compensated resistance-capacitance wide-band DC to 10MHz and are balanced to provide safe voltage gradients with less loading capacitance, better high frequency accuracy and low corona.

Applications include use with *panel meters, recorders, digital multimeters, oscilloscopes or computers* to measure, view and record DC, AC, transient pulse or pulse train and modulated CW. Also operates with Ross Engineering Corporation's analog fiber-optic amplifiers and transmission systems wide band DC to 1MHz.

Perform safe, rapid testing for dielectric withstand and ground continuity in one simple operation.

The ROD-L Hi-Pot Testers are designed to perform the tests specified by U.L., I.E.C., C.S.A., V.D.E. and F.C.C. The hipot test is a potentially dangerous operation, so the ROD-L product line has been designed with emphasis on safety, on efficiency and on speed with which the test can be made.

SIMPLE OPERATION

The hipot tester applies the test voltage to the device being tested for a duration of time preset from 1 second to 90 seconds. The device under test simply plugs into the front panel outlet, rather than being attached with clip leads. Clip leads can be used, however, for devices without a power cord.

Test limits for leakage current are preset by the user. In the event of failure, automatic circuitry turns off the high voltage within 2 ms, lights the "failure" lamp and sets off an audible alarm. This audible and visual alarm must be reset by the user. (Meets U.L. requirements).

Use a ROD-L Hi-Pot Tester for production line testing, incoming inspection, and in-product development.

690

Models 690 and 693 Series Attenuation Networks are decade type, direct reading units providing reliable performance throughout the audio frequency spectrum.

Used as secondary attenuation standards, they are especially useful in the performance of general laboratory or production tests where extreme accuracy is secondary. They are used for low level testing at audio frequencies, and can be used at frequencies up to 50,000 cycles with very little decrease in accuracy.

An outstanding feature of these attenuation networks is flexibility; input and output impedances may be changed by means of convenient plug-in pads, available in a broad range of values. Both "T" and Balanced "H" versions of the 690 and 693 series are available as standard units.

They are available as portable or rack mounted units.

Input and output impedance adjusting pads are conveniently located and removable from the front panel.

Series 690 networks come with either balanced (Balanced "H") or unbalanced ("T") networks. The two dial models have a range of 0 to 110 db in steps of 1 db. The three dial models have a range of 0 to 111 db in steps of 0.1 db. The models with balanced networks are arranged so they may be used as unbalanced networks with the same attenuation range, but with one-half the base impedance.

Specifications shown are standard. Variations to fit individual customer requirements are available on request.

795

Model 790 and 795 Attenuation Networks are portable, ruggedly constructed, decade type, direct reading units providing accurate performance into the low radio frequency spectrum.

The instruments cover a range from 0 to 10 mc. They have positive detent action and mechanical stops incorporated into each decade.

Stray capacitance and frequency discrimination are minimized through precision design. Silver alloy switch blades and contacts guarantee reliable long term operation.

These attenuator networks are general purpose instruments for use in laboratories, quality control departments and test facilities. They are particularly useful for making accurate measurements of gain or loss on filters, transformers, amplifiers and other equipment.

Both models are equipped with jack-top binding posts.

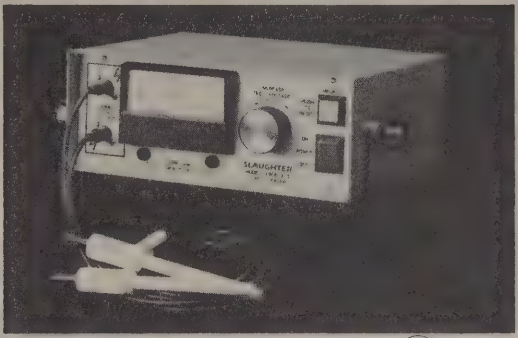
Battery Element Testers

Models Available For Both Moist and Dry Charged Cells

Briefly, these testers subject the battery elements to a high voltage which appears between all plates and across all separators. If everything is normal — that is, if there are no defects in the separators, no runs, no trees, etc. — the battery element will withstand the test voltage and only a normal amount of leakage current will be registered by the test instrument.

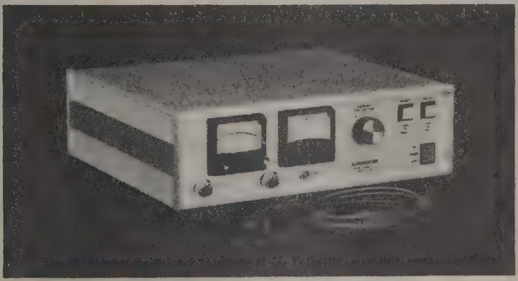
Proper test voltage for any particular battery element must be established by the user. Generally this will be in the range of 1,000 to 1,500 volts for elements with separators of less than .045", unless some marginal defects can be tolerated. For separators in the range of .045" to .065", a voltage in the range of 2,000 to 3,000 is normally required.



"Fail-Safe" 120 K Insulation Testers

The Series 2300 Testers are specifically engineered to conform with regulations first instituted in 1983 which are commonly referred to as "120 K Requirements". Additionally, this series is U.L. Listed.

Test voltage is continuously variable and monitored by a single built-in voltmeter. Sensitivity may be adjusted over a load current range. The 120-K ohm resistor terminals on the front panel allow the operator to check instrument calibration quickly and easily at any time. Audible and visual signals are locked in upon reject and must be manually reset before testing can be resumed. In the unlikely event that the Reject/HV Cut-off Circuit should fail, the instrument will go into the reject mode on the next bad part and will not reset. This protects the operator from shock hazard and from passing bad parts while unaware the Reject/HV Cut-off Circuit is inoperative.



Coil & Winding Testers

- Tests Solenoids, Chokes, Transformers, Stators, Armatures, Etc.
- Exposes Shorted Turns as Well as Opens and Grounds

The surge test is without question the most comprehensive single test used to check coils and windings. In addition to shorts, opens, and grounds, the surge test can also expose latent defects such as shorted turns which will not show up on other types of tests. From simple solenoids through chokes, transformers, stators, and armatures, the surge test is a necessary step in the manufacture of all high quality wound products.

Though the instantaneous energy is high, average energy levels are low. Therefore, the high voltage stresses required to conduct a good test are produced without damaging good parts.

US DIGITAL

T2 Tilt sensor Incremental Inclinometer

The T2 inclinometer is a low cost digital tilt transducer used to report the angle of an object with respect to gravity.

Optical shaft encoder technology provides unlimited range and virtually eliminates linearity errors.

Internally, an optical encoder disk is suspended between two micro-ball bearings. A weight placed on one side of the wheel assembly causes it to follow the source of gravity.

A beam of collimated light generated by a lensed LED projects the codewheel image onto an array of photodiode detectors on a monolithic chip. As the housing moves relative to the codewheel, the moving image of radial lines is converted to realtime TTL outputs.

Features

- Low cost
- Fast response
- Rugged and simple
- 2-channel quadrature outputs
- 3rd channel index option
- TTL compatible
- -40 to +100°C operating temperature
- Single +5v supply
- 360 degree range
- 1440 codes/rev. = 0.25° resolution
- 3600 codes/rev. = 0.1° resolution
- 7200 codes/rev. = 0.05° resolution
- 2 year warranty

Damping:
Internal magnetic damping is a balance between response time and ringing. The standard damping will fit many applications. Typical settling time for standard damping appears to be less than 200 milli-seconds. Double damping slows the settling time by several hundred milli-seconds, not by ringing, but by more slowly approaching the final position. Some applications may not require any damping, such as motion detectors. Others may require double damping to average out cyclic motion such as found in moving vehicles. Damping options can be specified when ordering.

Index:
The optional index can serve as an absolute reference to reset an external counter. For standard orientation, the index will go high when the connector pins point toward gravity. Other orientations can be specified.

Digital displays:
Several digital counters with LCD displays are available which will connect directly to these inclinometers. Check with us about models, price and availability.

Absolute Inclinometer:

The Vitrek 944i

A new benchmark in Dielectric Analyzer performance, safety and value.

If you need one unit that does the work of a multitude of test instruments, consider the speed, power and flexibility of the Vitrek 944i.

The Vitrek 944i combines AC dielectric strength testing (AC Hipot) with DC dielectric strength testing (DC Hipot), insulation resistance (to 65 Gigohms) and earth continuity measurement all in one feature-rich automated instrument. This compact dielectric analyzer lets you measure four electrical safety test parameters from a single test connection–all with the touch of a button.

The Vitrek 944i delivers top performance and versatility for manufacturing test, product safety engineering, component evaluation, as well as research and development applications. You'll find that the multifunction 944i is loaded with features that even the larger more expensive dedicated testers don't offer. Powerful features including-Automatic calibration, built-in diagnostics, internal "watchdog" safety monitor, user memory for up to 100 test routines, arc detection and available interface package with IEEE-488.2, RS-232 and direct test results printout capability.

The intelligent choice for operator safety

At Vitrek, operator safety is not just a concern, it is a relentless commitment. So we engineered the 944i with a high-impact injection molded front-end with no exposed metal parts to present a potential user shock hazard. We put in an internal "watchdog" safety monitor which automatically shuts down the output in the event of an inadvertent disconnect. And the Vitrek 944i boasts an impressive user programmable "Arc Detection" circuit, capable of shutting down the high voltage system within microseconds.

For added peace of mind the on-board diagnostics of the 944i execute a complete check of all safety systems every time you power up.

World Class technology means reliability you can depend on

The Vitrek 944i provides increased performance and reliability when compared to discrete testers. Extensive use of ASIC, PAL and built-in test technologies make possible this high level of functionality with far fewer components than existing instruments.

RESUME

Walker Scientific Inc. is part of the Walker Magnetics Group which has been in magnetics since the late 1800's.

Our dedication to the science of magnetics has enabled us to develop product lines which have advanced the state-of-the-art in many disciplines: Magnetic Measuring Instrumentation for analyzing magnetic fields and Laboratory Magnet Systems for producing magnetic fields, have made us a leader in magnetic systems and instrumentation throughout the world.

In addition, two new product lines have been added to further broaden our instrumentation base; Magnetic Charging and Conditioning equipment and instrumentation to meet the ever increasing demands of quality for Nondestructive Testing (NDT) of materials

Our products are also finding application in the growing field of biomagnetics. NMR technology is being used in an advanced technique of diagnostic body scanning that offers many advantages over conventional X-ray Tomography. Methods for magnetically controlling gastric bleeding without surgery and for stretching the esophagus in infants born with a congenital malformation known as esophageal artresia have also produced encouraging results.

AC LINE MONITOR

Miniature, 3-Digit LED, Self-Powered

- ***Plugs directly into wall outlet***
- ***Screw terminals for panel mounting***
- ***Subminiature size***
- ***Large, easy-to-read display***
- ***Fully encapsulated for ANY environment***
- ***85 to 264 VAC operation (47-63 Hz)***
- ***Half wave averaging, RMS calibrated***
- ***Very low cost***

DMS-20PC-1-LM is a component size, self-contained, low-cost AC voltmeter for true line measurements. It requires no additional components or auxiliary power. Simply plug it into any wall outlet and instantly read line voltages from 85 to 264 VAC (47-63 Hz). The large (0.37") bright red LED display is a DATEL exclusive making the DMS-20PC-1-LM easily readable in virtually any lighting condition.

DMS-20PC-1-LM employs half-wave sinusoidal averaging techniques (RMS calibrated) and has a display resolution of 1 VAC over the full range input span of the meter. Packaged in a red filter case with integrated bezel, the DMS-20PC-1-LM is fully encapsulated for ruggedness. Reliable, trouble-free operation is assured with low parts count and SMT assembly. All units are overvoltage protected to 300 VAC. The operating temperature range is a wide –25°C to +60°C.

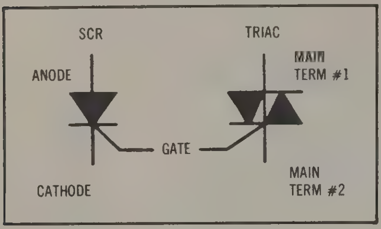
MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors*. Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/ reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

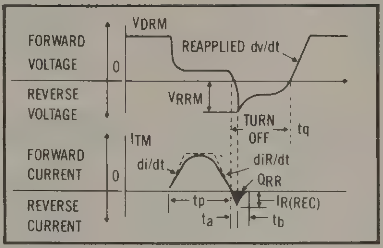


Fig. 1. Concurrent voltage and current waveforms

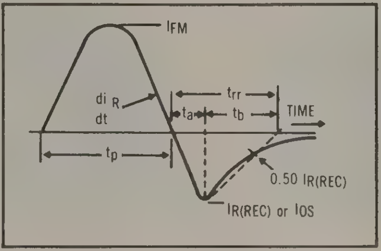

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$; *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature*.

$T_{J(MAX)}$: *Maximum allowable junction temp*.

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

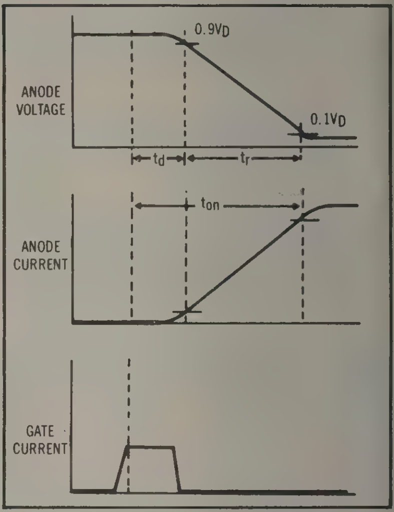

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time*. Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage*.

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

LAUREL ELECTRONICS, INC.™

The Laureate series provides accurate display and control of analog signals such as DC and AC voltage and current, thermocouples, RTD's, process signals, strain gauges and load cells. Input type and scaling of the input signal to display directly in engineering units to 99,999 counts may be selected by the front panel pushbuttons or via RS-232-C or RS485. The patented method of analog-to-digital conversion allows the meter to make up to 60 conversions per second for fast response in control applications and true peak reading capability. Adaptive filtering provides high noise rejection while responding rapidly to step inputs. Outputs may operate from either the filtered or nonfiltered signal. The meter operates from 85 to 264 Vac and 90 to 370 Vdc to allow use worldwide. Optional alarm outputs, analog output and digital interface convert the Laureate from indicator to system control and interface.

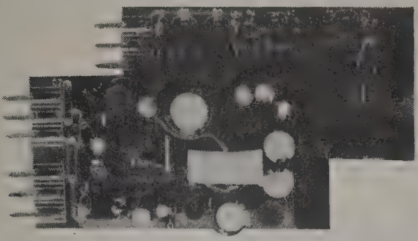
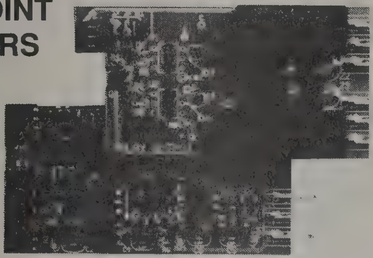
POWER SUPPLIES



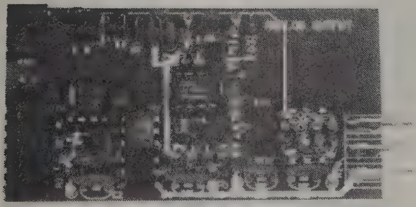
The Laureate series uses high frequency, switching power supplies to provide stable, isolated power for meter operation. Switching power supplies substantially reduce weight of the meter while providing outputs over a broad range of input voltage and frequency. +5 Vdc and –5 Vdc outputs and two isolated excitation power sources are available. The standard power supply operates on power inputs from 85 to 264 Vac, 47 to 440 Hz and from 90 to 370 Vdc. Hence, units may be operated worldwide with the same power supply. The optional low voltage power supply operates from 8 to 28 Vac, 47 to 440 Hz and 9 to 32 Vdc. This allows Laureate to be operated from a variety of batteries or 28 Vac, 400 Hz aircraft power. The isolated excitation supplies provide 12 Vdc at 120 mA and 24 Vdc at 30 mA. These supplies may be used to power the analog output and RS-232-C options or external transmitters and strain gauges. The Load Cell meter converts the 12 V output to a highly stable, accurate 10 Vdc excitation for up to 4 350 Ohm load cells. The supplies are designed to meet UL/VDE safety standards and FCC/VDE EMI requirements.

DUAL SETPOINT CONTROLLERS



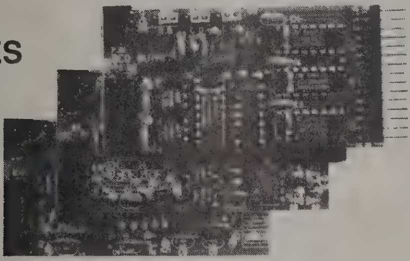
The setpoint control option adds control and alarm capabilities to the Laureate. Two versions are available; the relay board has two Form C, 10 A @ 250 Vac relays and the optically isolated board provides two open collector outputs rated at 30 Vdc and capable of sourcing 30 mA. Outputs may be set to operate above or below the setpoint or disabled. Open collector or relays may be individually programmed to operate in a latching or automatic mode. In the latching mode, when an alarm or shutdown condition is reached, the output remains in the alarm condition until it is manually reset by the front panel pushbuttons or through the rear connector. The output is automatically reset in the nonlatching mode when the alarm condition no longer exists. When operating from the unfiltered input, output response to an alarm occurs within 20 milliseconds. The filtered input reduces the chance of alarms triggering due to noise. Setup selection of 2 to 128 readings prior to updating the output provides a time delay and reduces relay chatter. Setpoint values are entered by front panel pushbuttons or serial interface.

ANALOG OUTPUT



The analog output produces an isolated signal of 4 to 20 mA and 0 to 10 Vdc for chart recorders, computers or transmission to a central control room. The output for thermocouples and RTD's is linearized with the same accuracy as the basic meter. A 12-bit D-to-A converter updates the output 57 times per second with a resolution of .025%. Accuracy of the analog output is .05%. The high update rate allows the output to closely track the input signal. The output may be operated from either the filtered or nonfiltered input. Power is provided by the meter 12 or 24 Vdc excitation supply. Using the 12 V supply, the 4 to 20 mA output can drive loads up to 400 Ohms and up to 1000 Ohms with 24 V. The output is isolated to 500Vp from signal ground and 1500 Vp to power ground, eliminating errors due to ground loops. Scaling of hte output is easily entered by the front panel pushbuttons or RS-232-C or RS-485 interface. The low and high output signals may be set to equal any value from –99,999 to +99,999. This allows the low output to be set to a displayed value either above or below the high output.

DIGITAL INTERFACES



The Laureate offers isolated full duplex RS-232-C or RS-485 communications or 3-state, stored, parallel BCD to interface with computers, PLC's or other digital devices. Laurel provides IBM compatible software with the RS-232-C and RS-485 interfaces to allow simple menu-driven setup of the meter. The information transmitted via RS-232-C and RS-485 includes present signal value, peak signal value and alarm values and status. The RS-485 allows transmission over long distances in noisy electrical environments and is addressable, allowing multiplexing with up to 30 other devices. Baud rates are selectable from 300 Hz to 19,200 Hz. The Laureate may be used as a remote display vai the digital interface; no signal conditioner is required. The parallel BCD has 3-state outputs to allow multiplexing with other meters for data logging. A single line enable is used to address each meter. BCD Hold and Data Ready output simplify interface. Outputs are isolated to 500 Vp from signal ground and 1500 Vp to power ground. The BCD board may be powered by the meter 5 Vdc if no isolation is required.

"PRESENTOR" Range of Analog Meters

There are four sizes in the Sifam 'Presentor' range, designated types 19, 29, 39, and 49. The uniquely versatile design enables each size to be displayed in four different modes:

Style 'W' is for back-of-panel mounting with only the scale and pointer visible (types 19W, 29W, 39W and 49W)

Style 'WF' is also for back-of-panel mounting but with a clip-on black bezel (types 19WF, 29WF, 39WF and 49WF)

Style 'M' is for front-of-panel mounting with a snap-on mask in black (types 19M, 29M, 39M and 49M)

Style 'B' is also for front-of-panel mounting but with a snap-on bezel in black (types 19B, 29B, 39B and 49B)

Effective illumination can be provided by back-lighting through the translucent body on types 29, 39 and 49.

APPLICATION

The Presentor Range of meters is suitable for both DC and AC with self contained ranges as follows:

VDC	VAC
50μA — 2A	60μA — 100mA
50mV — 250V	1V — 250V

A NEW SMALL-SPACE MOVEMENT

The taut-band (ligament suspended) movement has a powerful all-new core-magnet incorporating advance materials chosen for high technical performance. The design insures that the calibration of the meters is unaffected when mounted on a steel (ferrous) panel.

The movement is contained within a barrel of minimal volume to reduce the amount of space required behind the panel (please see dimensional drawings).

CONSTRUCTION

The body (or base) is molded from translucent high impact polystyrene with a transparent acrylic front. Mask and bezels are in A.B.S.

SCALES

Standard dial markings are as shown on the meter photographs but special markings can be supplied to customers' requirements.

The meters can be supplied with left-hand, center or right-hand zero. Mirror dials are available on types 29, 39 and 49. The zero adjuster, normally located on the front face, can be located at the rear if required.

ACCURACY

Sifam 'Presentor' meters are supplied in accordance with ANSI C39.1 and BS89: 1977, IEC51.

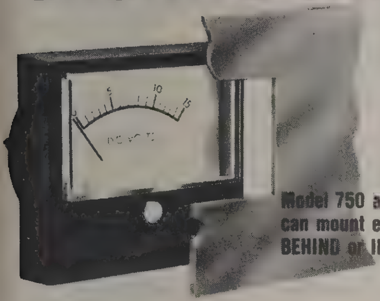
Shurite METERS

Rugged, Low-Cost Indicating Meters and Testers...since 1904

A PRIME TECHNOLOGY COMPANY

SHURITE WINDOW MOUNT PANEL METERS



Model 750 and Model 850 Meters can mount either way — BEHIND or IN FRONT of the panel!

These fine meters provide the same reliable performance for which Shurite has been known since 1904... *plus* new mounting flexibility... *plus* that new "textured black" look. Both models are, of course, still available with standard case fronts. Order the "new look" meters as Model 750BP and Model 850BP.

- The redesigned case front provides mounting flexibility and smart "textured black" finish.
- Two sizes — 3½″ (Model 750BP) and 2½″ (Model 850BP).
- Available either with or without front-access zero adjuster.

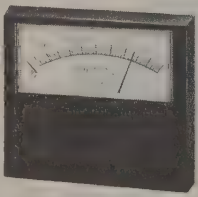
FREQUENCY METER SERIES 7000/8000



Ruggedly designed for lasting performance and engineered for mounting flexibility — either in-front-of-the panel or behind-the-panel

- Expanded scale, lance pointer, zero adjust.
- Off-scale zero position.
- Two convenient sizes — 3½″ and 2½.″
- High reliability at low cost.
- DIMENSIONS: Refer to engineering drawings of Model 750/850 meters immediately above. Dimensions are identical except for barrel depth which measures 1-13/16″ (46.0mm) for both Series 7000 and 8000 instead of 23/32″ (18.3mm).

This new low cost approach to frequency measurement employs solid state components ...thereby completely eliminating problems caused by waveform distortion. Line frequencies are monitored and displayed on an expanded scale analog panel meter. Complete system monitoring, of course, requires an appropriate voltmeter and ammeter as companion instruments. Both instruments can be ordered from Shurite and are available from stock.

THRU-PLUG LINE VOLTAGE TESTER

Pocket-size Model 79406-LT. Test the outlets you use in seconds. Simply push in plug, read voltage, and then plug the appliance into the Thru-Plug.

FIVE DIFFERENT SERIES OF SHURITE METERS offer choice of more than 260 standard-range, ±5% accuracy instruments — stocked by your local distributor, backed by complete factory inventories. Moving Magnet DC types or double-vane repulsion, jeweled bearings AC types.

- **Communication** on RS232, RS422 and bi-directional on RS485. RS485 can operate as a two wire LAN with up to 32 other units at 9600 baud.
- The measured parameter can be **retransmitted** as a standard process signal (4-20 mA, 0-1 mA, 1-5 volts or BCD). The signals are input isolated at an accuracy of 0.3%.
- **Connection** to each instrument is easily accomplished via **Terminal Block** style connectors. The connectors will accept up to a 14 gauge wire.
- **Easy Set-up** of system parameters from the front panel. Features such as zero adjust, gain, set points and meter scaling are all set with a touch of a button.
- AC current and AC voltage measurements are **true RMS** readings to the 7th harmonic.
- Visual safety **overrange** indication is provided whenever the measured signal exceeds the bar full scale value. In this condition, the full scale LED will flash, the **digital display** will flash and continue to read to the full meter count.
- **Colored LED Displays:** standard is red, optional–green and amber.
- The BarGraph's inherent solid state circuitry provides excellent **high shock** and **vibration** characteristics.

APPLICATIONS

- DC Voltage measurements from 50 mV dc to 250 Vdc directly. Higher voltages can be measured and displayed with an external divider network.
- DC current from 50 μA dc to 5 Adc can be measured directly. Higher ranges are measured with an external current shunt.
- AC Voltage measurements are true RMS readings up to 250 Vac directly.
- AC Current are true RMS readings up to 5.0 A directly.
- Thermocouple - J, K, T, R, S & E are accepted. Ice point reference and cold-junction compensation is internal. Linearization tables are pre-programmed and stored for each thermocouple type. The BarGraph can be calibrated and scaled in degrees C or F.
- 100 ohm platinum RTD with DIN 43760 standard temperature coefficient alpha = 0.00385/°C is linearized within the instrument. The meter can be configured for a 2 or 3 wire system and can be calibrated in C or F. Linearity for other RTD's can be compensated.
- Frequency or rate indication from Magnetic Pickups, mechanical counters or optical sensors. The BarGraph accepts signals from 5 to 250 V over the frequency range of 10 Hz to 20 kHz directly.
- Power-watts for single phase, three-phase three wire and four wire sinusoidal signals are directly measured (no external transducer required). Transformer input isolation. Power is calculated $EI \cos \Theta$ and displayed on the bar and digital display or can be retransmitted as a standard process signal.
- Reactive power is measured and displayed (VARS) for single phase and three phase, three and four wire systems. No external transducer required; input from CT's (5 A) and PT's (120 V or 240 V) directly to meter. Reactive power is calculated $EI \sin \Theta$.
- Power factor is measured and displayed on a center zero scale with center scale equal to 1.0 power factor. Meter input is transformer isolated. Power factor is calculated: $\cos \Theta = P\text{ (watts)} / \sqrt{P^2 + Q^2(\text{VARS})}$
- Phase angle of sinusoidal voltage and the start of sinusoidal current. The BarGraph is center zero and calibrated (Neg.) LAG/LEAD (Pos.) in degrees. Measurements are made on voltages up to 250 Vac directly, 50 to 400 Hz.
- Conventional process signals are easily displayed on all BarGraph meters. Flow, pressure, speed, position, temperature and level can be measured and displayed in the appropriate engineering units.

The most popular Bowmar meter provides the maximum features in the smallest package of any 100-segment bargraph. The excellent visibility of this meter permits a greater number of variables to be presented in less space than by conventional means. Two basic designs are available: End-reading (bar grows from one end) and Center-zero (bar grows in either direction from the center). 100 segments (0.55″×3.75″)

The military version of the APM 100 series is qualified for a number of military standards and features a watertight case. This meter is ideal for harsh and unusual environments in industrial plants, equipment, jet engine test instrumentation, ships, and aircraft. The rugged construction and all-metal case of this 100-segment bargraph holds up to the worst possible abuse. Specialized military versions include a digital display, lighting mask and custom ranging among other options. 100 segments (.75″×3.75″)

BGD100

The BG100 and BG600 are low-cost versions of the APM Series. These meters are available in a limited number of standard ranges. The available ranges are designed to work with off-the-shelf transducers to measure virtually any phenomenon. The BGD Series effectively communicates information more directly and at greater distances than a simple digital display. The bar display provides relative information such as percentage or level while the digital display provides absolute value or quantity.

TRENDLINE (Formerly NES) TRI-COLOR BARGRAPHS

Why you Need Color...

Color-changing bargraph calls your attention!

Green* = **SAFE**
Indicates normal operating conditions.

Yellow* = **CAUTION**
Indicates that a problem is developing.

Red* = **WARNING**
Indicates that a problem exists.

The ENTIRE bar changes color!

*NOTE: WARNING, CAUTION and SAFE zone colors are user selectable as red, yellow or green.

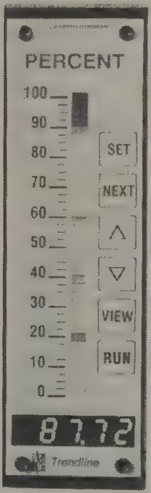
FEATURES

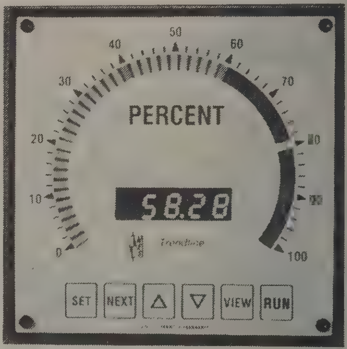
- 115 Vac powered
- Front panel access to set-up controls
- Bar display is 3.7″ (high) × 0.20″ (wide)
- Digital display has 5 green, 7-segment LED characters, 0.30″ in height
- 3 user-selectable bar colors, 4 user-selectable color-change set points
- User-selectable bar display intensity level, decimal point location, center/bottom zero format
- Fully scaleable digital display and bar display
- A socketed scaling resistor can be used to convert a 4-20 mA meter to nearly any analog input
- Various levels of input signal filtering are selectable
- Accuracy: ±0.01% of full scale ±0.3°F (Thermocouple Inputs)

The complexity of modern control rooms can hide problems that occur during a process. The quickest way to spot a problem is to have instrumentation that calls it to your attention. **Color** is the best way to do this. Color has always been used to convey information, such as color coded wires, signal corp flags, stoplights, maps, etc.

Trendlines are the first meters to offer a color-changing bargraph for immediate problem recognition. Whether you have 2 meters or 2000, the color-changing bargraph allows your operators to spot developing or existing problems immediately.

The time saved through immediate recognition will help prevent equipment damage, reduce down-time and maintenance overhead, and help improve operational safety.





TYPE V2 TRANSDUCERS (Formerly Westinghouse)

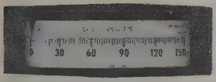
SWITCHBOARD INSTRUMENTS (Formerly Westinghouse)

TYPE 252
4½" Scale Length
1½% Accuracy

Vertical Type (Grouped)



Horizontal Type

APPLICATION

Type 252 edgewise instruments were designed specifically for the nuclear power industry for use on control panels. However, they are well suited to any use where high reliability and efficient use of space are important considerations.

These instruments incorporate into edgewise instruments the same taut-band suspension system which is used in the highest quality Westinghouse portable and switchboard instruments.

They are available in types for direct measurement of standard electrical quantities, or in combination with transducers for measuring any other electrical or mechanical quantity capable of being converted into a proportional electrical quantity.

STANDARDS

The Type 252 instruments meet the flamability requirements of IEEE Standard 420-1973 and they pass the seismic qualification tests under IEEE Standard 344-(1975).

RATINGS (Self-Contained)

APPLICATION

The Type K-241 instruments have been designed to achieve the ultimate in reliability and performance. Instruments of this class are recommended for use on electric utility switchboards and control panels for similar industrial service.

Selection of the Type K-241 instruments is indicated whenever there is a need for frequent, accurate, quick readings and where failure in an instrument circuit could affect an associated critical circuit. This is usually the case where current and potential transformers or transducers are shared with devices having protective or control functions.

STANDARDS

The Type K-241 instruments comply with ANSI Standards C39.1 for 1% class switchboard instruments. In such areas as relate to shock, vibration, friction, repeatability and electrical losses most K-241 types will exceed these specifications, because of the improvements inherent in the unique Westinghouse taut-band design.

These instruments satisfy the requirements of IEEE Standard 344 (1975) "Qualification of Class IE Equipment for Nuclear Power Generating Stations."

FEATURES

Taut-Band Suspension
All Type K-241 instruments, except those which may rotate continuously, use the Westinghouse-perfected taut-band suspension. Instruments incorporating this feature are identified by the trademark ®. This suspension is a commercial adaptation of the one developed by Westinghouse for Navy HI-Shock service. The taut-band suspension instrument has certain unique advantages over the conventional pivot and jewel types:

1. It eliminates friction, giving better accuracy and almost perfect repeatability.
2. It gives top performance under adverse conditions of shock and vibration.
3. It permits mounting on apparatus without fear of damage in shipment.
4. It reduces maintenance, thereby saving money throughout the lifetime of the instrument.
5. It assures longer life, reducing annual depreciation and replacement costs.
6. It has greater sensitivity, reducing power burdens on circuits being measured.

FEATURES

Shock resistant case and movement make P-141 instruments the perfect choice in situations rough handling may occur.

High overload capacity is designed into the instruments. There are no high resistance spiral springs to anneal when heated with high current. The taut-band and the coil can handle momentary overloads of 35 to 150 times normal. The mechanism will not be damaged by the forces associated with these overloads.

Versatility–Ratings and ranges have been related to the common working levels so that instruments can usually be operated well up on the dial to assure maximum accuracy of reading. Composite scales are provided wherever a single scale would necessitate reading a division as an odd fraction of a measurement unit. Scales are subdivided into units of 1, 2, 5 and their decimals.

6 Inch, 100° Arc Scale
9" x 7¼" x 3¾" Case
½ Percent Accuracy Class

SPECIFICATIONS

Insulation Test: 2600 volts rms, terminals to case for one minute.
Accuracy: ½% Class
Scale Arc: 100°
Scale Length: 6"
Shielding: Magnetically shielded.

FEATURES

Maintenance-free operation is assured with taut-band suspension. There are no pivots and jewels to be worn in use, damaged by vibration or shock, or to become sticky with dirt.

High overload capacity is designed into the instruments. There are no high resistance spiral springs to anneal when heated with high current. The taut-band and the coil can handle momentary overloads of 35 to 150 times normal. The mechanism will not be damaged by the forces associated with these overloads.

Excellent magnetic shielding–well beyond ANSI specifications.

Versatility–Many ratings and ranges are available. These have been related to working values to permit the instruments to be used in the upper portion of the scales where maximum reading accuracy can be achieved. Scales are subdivided into units of 1, 2, 5 and their decimals to avoid awkward fractional scale readings.

AC/DC TONG TEST AMMETERS (Formerly Columbia)

For Measuring AC or DC Current

formerly Columbia Manufacturing

- Instant Readings ■ One Hand Operation
- No Breaking of Circuit ■ No Shunts
- No Transformers ■ Accurate
- Dependable ■ Ranges Changed Quickly

Measures A.C. or D.C. Instantly and Accurately.

Simply by encircling conductor with the tongs and closing them, a clear, accurate reading is instantly registered on the scale. The tongs open by a slight pressure of one finger on the trigger and are self-closing.

Eliminates any Breaking of the Circuit.

Readings are taken without breaking the circuit or insulation. Accurate readings are made even through insulated cables. No shutdowns. No time, labor or production losses while a current measurement is being made.

SPECIAL NOTE: The 600, 800 and 1000 ampere ranges of Types C and D and the 500, 600, 800 and 1000 ampere ranges of Type CS are not universal. If ranges for AC and DC are needed separate ranges must be ordered.

TYPE AX

Accommodates conductors up to 1½″ diameter. Available ampere scale ranges: 0-50, 0-75, 0-100, 0-150, 0-200, 0-300, 0-400, 0-500, 0-600, 0-800, 0-1000. (All ranges for Type AX are for use on both AC and DC)

TYPE D

Accommodates conductors up to 3″ diameter, or bus bars up to 4½″ × ½″ or 4″ × 1″. Available ampere scale ranges: 0-75, 0-100, 0-150, 0-200, 0-300, 0-400, 0-500 for use on both AC and DC; also 0-600AC, 0-600DC, 0-800AC, 0-800DC, 0-1000AC, 0-1000DC.

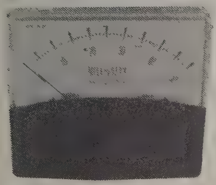
TYPE CS (Not Shown) Accommodates conductor up to 2½″ diameter. Available ampere scale ranges: 0-75, 0-100, 0-150, 0-200, 0-300, 0-400 for use on both AC and DC, also 0-500AC, 0-500DC, 0-600AC, 0-600DC, 0-800AC, 0-800DC, 0-1000AC, 0-1000DC. Type CS is a modification of the standard Type C Tong Test Ammeter. It has a special reduced lamination section at the top of the tongs which permits placing the tongs around a fuse or conductor where there is a limited space (9/16″ or more) behind the fuse or conductor. The Type C is recommended for best accuracy where clearance behind fuse or conductor is 13/16″ or more.

SPECIALTY METERS (Formerly Parker/Airpax)

RECTANGULAR PANEL METERS



Sizes available: 2 1/2", 3 1/2", and 4 1/2" wide.

MEDALLION PANEL METERS

Sizes available: 2 1/2"and 3 1/2" wide.

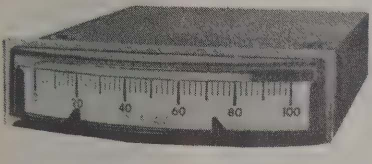
The Airpax meter deserves the phrase "simplicity-of-design." The ultra-thin movement can assemble into a compact meter unit only ½-inch "thin." This unique thin design makes the edge-reading meter ideally suited for high density applications where multiple units may be stacked to conserve space.

The Airpax meter design provides the user with unique surface mounting versatility. The meter has no protruding barrel and can be mounted directly to the panel without complicated panel cutouts.

The inherent rugged design and low mass of the patented movement enable it to withstand acceleration shocks far in excess of other meters. As much as 240G's have failed to affect indicating accuracy. The movement is typically unaffected by continuous electrical overloads.

More than 50 standard ranges in both panel-mount and wdge-reading meters are available. One of these designs may well be your answer to an indicating or control application problem. If you cannot use an existing meter, we will work with you to design a unit to meet YOUR exact specifications.

EDGE-READING METERS



Sizes available for indicating meters are: 1 1/2", 2 1/2", 3", 3 1/2", and 4 1/2" wide and 1/2", 3/4", or 7/8" thick.
Edge-reading control meters are available with 1 or 2 set-points, using contactless solid-state switching with scales and circuits to meet your requirements. Sizes available for control meters: 3 1/2" wide by 7/8" thick.
